AWSCleanRoomsFullAccessNoQuerying

Description: Allows full access to AWS Clean Rooms resources except for querying in a collaboration and access to related AWS services.

AWSCleanRoomsFullAccessNoQuerying is an [AWS managed policy](#).

Using this policy

You can attach AWSCleanRoomsFullAccessNoQuerying to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 12, 2023, 16:12 UTC
- **Edited time:** May 14, 2024, 18:31 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSCleanRoomsFullAccessNoQuerying

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSCloud9ServiceRolePolicy

Description: Service Linked Role Policy for AWS Cloud9

AWSCloud9ServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 30, 2017, 13:44 UTC
- **Edited time:** January 17, 2022, 14:06 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSCloud9ServiceRolePolicy

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "ec2:RunInstances",  
                "ec2>CreateSecurityGroup",  
                "ec2:DescribeVpcs",  
                "ec2:DescribeSubnets",  
                "ec2:DescribeSecurityGroups",

AWSCloud9SSMInstanceProfile

Description: This policy will be used to attach a role on a InstanceProfile which will allow Cloud9 to use the SSM Session Manager to connect to the instance

AWSCloud9SSMInstanceProfile is an [AWS managed policy](#).

Using this policy

You can attach AWSCloud9SSMInstanceProfile to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 14, 2020, 11:40 UTC
- **Edited time:** May 14, 2020, 11:40 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSCloud9SSMInstanceProfile

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",

AWSCloudHSMRole

Description: Default policy for the AWS CloudHSM service role.

AWSCloudHSMRole is an [AWS managed policy](#).

Using this policy

You can attach `AWSCloudHSMRole` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** February 06, 2015, 18:41 UTC
- **ARN:** `arn:aws:iam::aws:policy/service-role/AWSCloudHSMRole`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "ec2:CreateNetworkInterface",  
                "ec2:CreateTags",  
                "ec2:DeleteNetworkInterface",  
                "ec2:DescribeNetworkInterfaceAttribute",  
                "ec2:DescribeNetworkInterfaces",  
                "ec2:DescribeSubnets",  
                "ec2:DescribeVpcs",  
                "ec2:DetachNetworkInterface"  
            ],  
            "Resource" : [  
                "*"  
            ]  
        }  
    ]  
}
```

```
    }  
]  
}

AWSCodeBuildDeveloperAccess

Description: Provides access to AWS CodeBuild via the AWS Management Console, but does not allow CodeBuild project administration. Also attach AmazonS3ReadOnlyAccess to provide access to download build artifacts.

AWSCodeBuildDeveloperAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSCodeBuildDeveloperAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy

- **Creation time:** December 01, 2016, 19:02 UTC
- **Edited time:** May 02, 2024, 01:36 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSCodeBuildDeveloperAccess

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSCodeCommitReadOnly

Description: Provides read only access to AWS CodeCommit via the AWS Management Console.

AWSCodeCommitReadOnly is an [AWS managed policy](#).

Using this policy

You can attach AWSCodeCommitReadOnly to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** July 09, 2015, 17:05 UTC
- **Edited time:** August 18, 2021, 18:18 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSCodeCommitReadOnly

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSCodeStarNotificationsServiceRolePolicy

Description: Allows AWS CodeStar Notifications to access Amazon CloudWatch Events on your behalf

AWSCodeStarNotificationsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 05, 2019, 16:10 UTC
- **Edited time:** March 19, 2020, 16:01 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSCodeStarNotificationsServiceRolePolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Action" : [  
                "events:PutTargets",  
                "events:PutRule",  
                "events:DescribeRule"  
            ],  
            "Resource" : "arn:aws:events:*::rule/awscodestarnotifications-*",  
            "Effect" : "Allow"  
        },  
        {

AWSConfigRemediationServiceRolePolicy

Description: Allows AWS Config to remediate noncompliant resources on your behalf.

AWSConfigRemediationServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 18, 2019, 21:21 UTC
- **Edited time:** June 18, 2019, 21:21 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSConfigRemediationServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Action" : [  
                "ssm:GetDocument",  
                "ssm:DescribeDocument",  
                "ssm:StartAutomationExecution"  
            ],  
            "Resource" : "*",  
            "Effect" : "Allow"  
        },  
        {  
            "Condition" : {  
                "StringEquals" : {  
                    "iam:PassedToService" : "ssm.amazonaws.com"  
                }  
            },  
            "Action" : "iam:PassRole",  
            "Resource" : "*",  
            "Effect" : "Allow"  
        }  
    ]  
}
```

AWSConfigRoleForOrganizations

Description: Allows AWS Config to call read-only AWS Organizations APIs

AWSConfigRoleForOrganizations is an [AWS managed policy](#).

Using this policy

You can attach AWSConfigRoleForOrganizations to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** March 19, 2018, 22:53 UTC
- **Edited time:** November 24, 2020, 20:19 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSConfigRoleForOrganizations

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "organizations>ListAccounts",  
        "organizations>DescribeOrganization",  
        "organizations>ListAWSAccessForOrganization",  
        "organizations>ListDelegatedAdministrators"  
      ],  
      "Resource" : "*"
```

```
    }  
]  
}
```

AWSConfigRulesExecutionRole

Description: Allows an AWS Lambda function to access the AWS Config API and the configuration snapshots that AWS Config delivers periodically to Amazon S3. This access is required by functions that evaluate configuration changes for custom Config rules.

AWSConfigRulesExecutionRole is an [AWS managed policy](#).

Using this policy

You can attach AWSConfigRulesExecutionRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** March 25, 2016, 17:59 UTC
- **Edited time:** May 13, 2019, 21:33 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSConfigRulesExecutionRole

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "s3:GetObject"  
            ],  
            "Resource" : "arn:aws:s3:::*/*Config/*"  
        },  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "config:Put*",  
                "config:Get*",  
                "config>List*",  
                "config:Describe*",  
                "config:BatchGet*",  
                "config:Select*"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSConfigUserAccess

Description: Provides access to use AWS Config, including searching by tags on resources, and reading all tags. This does not provide permission to configure AWS Config, which requires administrative privileges.

AWSConfigUserAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSConfigUserAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 18, 2015, 19:38 UTC
- **Edited time:** March 18, 2019, 20:27 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSConfigUserAccess

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

{

```
"Version" : "2012-10-17",
"Statement" : [
    {
        "Effect" : "Allow",
        "Action" : [
            "config:Get*",
            "config:Describe*",
            "config:Deliver*",

AWSConnector

Description: Enables broad read/write access to ALL EC2 objects, read/write access to S3 buckets starting with 'import-to-ec2-', and the ability to list all S3 buckets, for the AWS Connector to import VMs on your behalf.

AWSConnector is an [AWS managed policy](#).

Using this policy

You can attach AWSConnector to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 11, 2015, 17:14 UTC
- **Edited time:** September 28, 2015, 19:50 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSConnector

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSControlTowerAccountServiceRolePolicy

Description: Allows AWS Control Tower to call AWS services that provide automated account configuration and centralized governance on your behalf.

AWSControlTowerAccountServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 05, 2023, 22:04 UTC
- **Edited time:** June 05, 2023, 22:04 UTC

- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSControlTowerAccountServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSControlTowerServiceRolePolicy

Description: Provides access to AWS Resources managed or used by AWS Control Tower

AWSControlTowerServiceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSControlTowerServiceRolePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** May 03, 2019, 18:19 UTC
- **Edited time:** April 12, 2023, 19:15 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSControlTowerServiceRolePolicy

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSCostAndUsageReportAutomationPolicy

Description: Grants permissions to describe the organization of the account, create S3 buckets for the MAP program and apply tags to it, create a Cost and Usage Report, and describe Cost and Usage Report definitions.

AWSCostAndUsageReportAutomationPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSCostAndUsageReportAutomationPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** November 01, 2021, 21:27 UTC
- **Edited time:** November 01, 2021, 21:27 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/
AWSCostAndUsageReportAutomationPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AWSDataExchangeServiceRolePolicyForLicenseManagement

Description: Allows AWS Data Exchange to access AWS services and Resources used or managed by AWS Data Exchange for license management.

`AWSDataExchangeServiceRolePolicyForLicenseManagement` is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 10, 2024, 14:54 UTC
- **Edited time:** October 10, 2024, 14:54 UTC
- **ARN:** `arn:aws:iam::aws:policy/aws-service-role/AWSDataExchangeServiceRolePolicyForLicenseManagement`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AllowLicenseManagerActions",  
            "Effect" : "Allow",  
            "Action" : [  
                "organizations:DescribeOrganization",  
                "license-manager>ListDistributedGrants",  
                "license-manager:GetGrant",  
                "license-manager>CreateGrantVersion",  
                "license-manager>DeleteGrant"  
            ],  
            "Resource" : [  
                "*"  
            ]  
        }

AWSDataSyncFullAccess

Description: Provides full access to AWS DataSync and minimal access to its dependencies

`AWSDataSyncFullAccess` is an [AWS managed policy](#).

Using this policy

You can attach `AWSDataSyncFullAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** January 18, 2019, 19:40 UTC
 - **Edited time:** October 18, 2024, 20:07 UTC
 - **ARN:** arn:aws:iam::aws:policy/AWSDataSyncFullAccess

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSDeadlineCloud-UserAccessJobs

Description: Provides user workstation access to AWS Deadline Cloud jobs with limited Read-Only permissions to call other necessary services. Attach this policy to the user role associated with your studio.

AWSDeadlineCloud-UserAccessJobs is an [AWS managed policy](#).

Using this policy

You can attach AWSDeadlineCloud-UserAccessJobs to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** April 01, 2024, 17:05 UTC
- **Edited time:** October 07, 2024, 18:24 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSDeadlineCloud-UserAccessJobs

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSDeepRacerAccountAdminAccess

Description: DeepRacer admin access to all actions including toggling between multiuser and single user mode.

AWSDeepRacerAccountAdminAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSDeepRacerAccountAdminAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 28, 2021, 01:27 UTC
- **Edited time:** October 28, 2021, 01:27 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSDeepRacerAccountAdminAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Sid" : "DeepRacerAdminAccessStatement",  
      "Effect" : "Allow",  
      "Action" : [  
        "depracer:*"  
      ],  
      "Resource" : [  
        "*"  
      ],  
      "Condition" : {  
        "Null" : {  
          "depracer:UserToken" : "true"  
        }  
      }  
    }  
  ]  
}
```

AWSDeepRacerCloudFormationAccessPolicy

Description: Allows CloudFormation to create and manage AWS stacks and resources on your behalf.

AWSDeepRacerCloudFormationAccessPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AWSDeepRacerCloudFormationAccessPolicy` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 28, 2019, 21:59 UTC
- **Edited time:** June 14, 2019, 17:02 UTC
- **ARN:** `arn:aws:iam::aws:policy/AWSDeepRacerCloudFormationAccessPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSDirectConnectServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** January 14, 2021, 18:35 UTC
- **Edited time:** January 14, 2021, 18:35 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSDirectConnectServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "secretsmanager:DescribeSecret",  
                "secretsmanager>ListSecretVersionIds",  
                "secretsmanager:GetSecretValue"  
            ],  
            "Resource" : [  
                "arn:aws:secretsmanager:*.*:secret:*directconnect*"  
            ]  
        }  
    ]  
}
```

AWSElasticBeanstalkMaintenance

Description: AWS Elastic Beanstalk Service Role policy that grants limited permissions to update your resources on your behalf for maintenance purposes.

AWSElasticBeanstalkMaintenance is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy

- **Creation time:** January 11, 2019, 23:22 UTC
- **Edited time:** April 29, 2024, 21:48 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSElasticBeanstalkMaintenance

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticBeanstalkManagedUpdatesCustomerRolePolicy

Description: This policy is for the AWS Elastic Beanstalk service role used to perform managed updates of Elastic Beanstalk environments. This policy should not be attached to other users or roles. The policy grants broad permissions to create and manage resources across a number of AWS services including AutoScaling, EC2, ECS, Elastic Load Balancing and CloudFormation. This policy also allows passing of any IAM role usable with those services.

AWSElasticBeanstalkManagedUpdatesCustomerRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticBeanstalkManagedUpdatesCustomerRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 03, 2021, 22:18 UTC
- **Edited time:** March 23, 2023, 23:15 UTC
- **ARN:** arn:aws:iam::aws:policy/
AWSElasticBeanstalkManagedUpdatesCustomerRolePolicy

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticBeanstalkReadOnly

Description: Grants read-only permissions. Explicitly allows operators to gain direct access to retrieve information about resources related to AWS Elastic Beanstalk applications.

`AWS_ElasticBeanstalk_ReadOnly` is an [AWS managed policy](#).

Using this policy

You can attach `AWSElasticBeanstalkReadOnly` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** January 22, 2021, 19:02 UTC
 - **Edited time:** January 22, 2021, 19:02 UTC
 - **ARN:** arn:aws:iam::aws:policy/AWSElasticBeanstalkReadOnly

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticBeanstalkRoleCore

Description: AWSElasticBeanstalkRoleCore (Elastic Beanstalk operations role) Allows core operation of a web service environment.

`AWSelasticBeanstalkRoleCore` is an [AWS managed policy](#).

Using this policy

You can attach `AWSElasticBeanstalkRoleCore` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** June 05, 2020, 21:48 UTC
 - **Edited time:** April 30, 2024, 00:01 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AWSElasticBeanstalkRoleCore

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSElasticBeanstalkServiceRolePolicy

Description: AWS Elastic Beanstalk Service Linked Role policy which grants permissions to create & manage resources (i.e.: AutoScaling, EC2, S3, CloudFormation, ELB, etc.) on your behalf.

AWSElasticBeanstalkServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** September 13, 2017, 23:46 UTC
- **Edited time:** June 06, 2019, 21:59 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSElasticBeanstalkServiceRolePolicy

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSElasticDisasterRecoveryConsoleFullAccess_v2

Description: This policy provides full access to all public APIs of AWS Elastic Disaster Recovery (AWS DRS), as well as all public APIs in other AWS services used by AWS DRS Console. Attach this policy to your users or roles.

AWSElasticDisasterRecoveryConsoleFullAccess_v2 is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryConsoleFullAccess_v2 to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 27, 2023, 13:35 UTC
- **Edited time:** July 29, 2024, 19:38 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSElasticDisasterRecoveryConsoleFullAccess_v2

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticDisasterRecoveryConversionServerPolicy

Description: This policy is attached to the AWS Elastic Disaster Recovery Conversion server's instance role. This policy allows Elastic Disaster Recovery (DRS) Conversion Servers, which are EC2 instances launched by Elastic Disaster Recovery, to communicate with the DRS service. An IAM role with this policy is attached (as an EC2 Instance Profile) by DRS to the DRS Conversion Servers, which are automatically launched and terminated by DRS, when needed. We do not recommend that you attach this policy to your IAM users or roles. DRS Conversion Servers are used by Elastic Disaster Recovery when users choose to recover source servers using the DRS console, CLI, or API.

AWSElasticDisasterRecoveryConversionServerPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryConversionServerPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** November 17, 2021, 13:42 UTC
- **Edited time:** November 27, 2023, 13:13 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSElasticDisasterRecoveryConversionServerPolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [
```

```
{  
    "Sid" : "DRSConversionServerPolicy1",

AWSElasticDisasterRecoveryEc2InstancePolicy

Description: This policy allows installing and using the AWS Replication Agent, which is used by AWS Elastic Disaster Recovery (DRS) to recover source servers that run on EC2 (cross-region or cross-AZ). An IAM role with this policy should be attached (as an EC2 Instance Profile) to the EC2 Instances.

AWSElasticDisasterRecoveryEc2InstancePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryEc2InstancePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** May 26, 2022, 12:30 UTC
- **Edited time:** November 27, 2023, 13:39 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSElasticDisasterRecoveryEc2InstancePolicy

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticDisasterRecoveryLaunchActionsPolicy

Description: This policy allows you to use Amazon SSM and additional services required permissions to run post-launch actions in AWS Elastic Disaster Recovery (AWS DRS). Attach this policy to your IAM roles or users.

AWSElasticDisasterRecoveryLaunchActionsPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryLaunchActionsPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 13, 2023, 07:38 UTC
- **Edited time:** May 19, 2024, 07:29 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSElasticDisasterRecoveryLaunchActionsPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticDisasterRecoveryNetworkReplicationPolicy

Description: This policy allows AWS Elastic Disaster Recovery (DRS) to support network replication.

AWSElasticDisasterRecoveryNetworkReplicationPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryNetworkReplicationPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** June 11, 2023, 12:36 UTC
- **Edited time:** January 02, 2024, 13:25 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSElasticDisasterRecoveryNetworkReplicationPolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",
```

```
"Statement" : [  
    {  
        "Sid" : "DRSNetworkReplicationPolicy1",  
        "Effect" : "Allow",  
        "Action" : [  
            "ec2:DescribeVpcAttribute",  
            "ec2:DescribeInternetGateways",  
            "ec2:DescribeVpcs",  
            "ec2:DescribeSubnets",  
            "ec2:DescribeNetworkAcls",  
            "ec2:DescribeSecurityGroups",  
            "ec2:DescribeRouteTables",  
            "ec2:DescribeAvailabilityZones",  
            "ec2:DescribeDhcpOptions",  
            "ec2:DescribeInstances",

AWSElasticDisasterRecoveryReadOnlyAccess

Description: You can attach the AWSElasticDisasterRecoveryReadOnlyAccess policy to your IAM identities. This policy provides permissions to all read-only public APIs of Elastic Disaster Recovery (DRS), as well as some read-only APIs of other AWS services that are required in order to make full read-only use of the DRS console. Attach this policy to your IAM users or roles.

AWSElasticDisasterRecoveryReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach `AwSElasticDisasterRecoveryReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 17, 2021, 10:50 UTC
- **Edited time:** July 29, 2024, 19:39 UTC
- **ARN:** `arn:aws:iam::aws:policy/AwSElasticDisasterRecoveryReadOnlyAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSElasticDisasterRecoveryRecoveryInstancePolicy

Description: This policy is attached to the instance role of Elastic Disaster Recovery's Recovery Instance. This policy allows the Elastic Disaster Recovery (DRS) Recovery Instance, which are EC2 instances launched by Elastic Disaster Recovery - to communicate with the DRS service, and to be able to fallback to their original source infrastructure. An IAM role with this policy is attached (as

an EC2 Instance Profile) by Elastic Disaster Recovery to the DRS Recovery Instances. We do not recommend that you attach this policy to your IAM users or roles.

`AWSElasticDisasterRecoveryRecoveryInstancePolicy` is an [AWS managed policy](#).

Using this policy

You can attach `AWSElasticDisasterRecoveryRecoveryInstancePolicy` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** November 17, 2021, 10:20 UTC
 - **Edited time:** November 27, 2023, 13:11 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AWSElasticDisasterRecoveryRecoveryInstancePolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticDisasterRecoveryReplicationServerPolicy

Description: This policy is attached to the Elastic Disaster Recovery Replication server's instance role. This policy allows the Elastic Disaster Recovery (DRS) Replication Servers, which are EC2 instances launched by Elastic Disaster Recovery - to communicate with the DRS service, and to create EBS snapshots in your AWS account. An IAM role with this policy is attached (as an EC2 Instance Profile) by Elastic Disaster Recovery to the DRS Replication Servers which are automatically launched and terminated by DRS, as needed. DRS Replication Servers are used to facilitate data replication from your external servers to AWS, as part of the recovery process managed by DRS. We do not recommend that you attach this policy to your IAM users or roles.

AWSElasticDisasterRecoveryReplicationServerPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSElasticDisasterRecoveryReplicationServerPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** November 17, 2021, 13:34 UTC
- **Edited time:** November 27, 2023, 13:28 UTC

AWSElasticDisasterRecoveryServiceRolePolicy

Description: This policy allows Elastic Disaster Recovery to manage AWS resources on your behalf.

AWSElasticDisasterRecoveryServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 17, 2021, 10:56 UTC
- **Edited time:** January 17, 2024, 13:49 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSElasticDisasterRecoveryServiceRolePolicy

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticDisasterRecoveryStagingAccountPolicy

Description: This policy allows read-only access to AWS Elastic Disaster Recovery (DRS) resources such as source servers and jobs. It also allows creating a converted snapshot and sharing that EBS snapshot with a specific account.

AWSElasticDisasterRecoveryStagingAccountPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AWSElasticDisasterRecoveryStagingAccountPolicy` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** May 26, 2022, 09:49 UTC
- **Edited time:** November 27, 2023, 13:07 UTC
- **ARN:** `arn:aws:iam::aws:policy/service-role/AWSElasticDisasterRecoveryStagingAccountPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSElasticLoadBalancingClassicServiceRolePolicy

Description: Service Linked Role Policy for AWS Elastic Load Balancing Control Plane - Classic

AWSElasticLoadBalancingClassicServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** September 19, 2017, 22:36 UTC
 - **Edited time:** October 07, 2019, 23:04 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSElasticLoadBalancingClassicServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "ec2:AttachNetworkInterface",
        "ec2:DetachNetworkInterface",
        "ec2:AssignPrivateIpAddresses",
        "ec2:AssignIpv6Addresses",
        "ec2:UnassignIpv6Addresses"
    ],
    "Resource" : "*"
}
]
}
```

AWSGlobalAcceleratorSLRPolicy

Description: Policy granting permissions to AWS Global Accelerator to manage EC2 Elastic Network Interfaces and Security Groups.

AWSGlobalAcceleratorSLRPolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** April 05, 2019, 19:39 UTC
- **Edited time:** October 29, 2024, 18:23 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSGlobalAcceleratorSLRPolicy

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSGlueDataBrewServiceRole

Description: This policy grants permission to glue to perform action on user's glue data catalog, this policy also provides permission to ec2 actions to allow glue to create ENI to connect to resources in the VPC, also allow glue to access registered data in lakeformation and permission to access user's cloudwatch

`AWSGlueDataBrewServiceRole` is an [AWS managed policy](#).

Using this policy

You can attach AWSGlueDataBrewServiceRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** December 04, 2020, 21:26 UTC
 - **Edited time:** March 20, 2024, 23:28 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AWSGlueDataBrewServiceRole

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AwsGlueSessionUserRestrictedNotebookServiceRole

Description: Provides full access to all AWS Glue resources except for sessions. Allows users to create and use only the notebook sessions that are associated with the user. This policy also includes other permissions needed by AWS Glue to manage Glue resources in other AWS services.

AwsGlueSessionUserRestrictedNotebookServiceRole is an [AWS managed policy](#).

Using this policy

You can attach AwsGlueSessionUserRestrictedNotebookServiceRole to your users, groups, and roles.

AWSIAMIdentityCenterAllowListForIdentityContext

Description: Provides the list of actions that are allowed for roles assumed with the IAM Identity Center identity context. AWS Security Token Service (AWS STS) automatically attaches this policy to assumed roles. The identity context is passed as ProvidedContext.

AWSIAMIdentityCenterAllowListForIdentityContext is an [AWS managed policy](#).

Using this policy

You can attach AWSIAMIdentityCenterAllowListForIdentityContext to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 08, 2023, 15:21 UTC
- **Edited time:** October 01, 2024, 14:19 UTC
- **ARN:** arn:aws:iam::aws:policy/
AWSIAMIdentityCenterAllowListForIdentityContext

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSIncidentManagerServiceRolePolicy

Description: This policy grants Incident Manager permission to manage incident records and related resources on your behalf.

AWSIncidentManagerServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** May 10, 2021, 03:34 UTC
- **Edited time:** December 05, 2022, 02:11 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSIncidentManagerServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AWSIoTDeviceDefenderAudit

Description: Provides read access for IoT and related resources

AWSIoTDeviceDefenderAudit is an [AWS managed policy](#).

Using this policy

You can attach AWSIoTDeviceDefenderAudit to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** July 18, 2018, 21:17 UTC
- **Edited time:** November 25, 2019, 23:52 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSIoTDeviceDefenderAudit

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

AWSIoTEventsFullAccess

Description: Provides full access to IoT Events.

AWSIoTEventsFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSIoTEventsFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 10, 2019, 22:51 UTC
- **Edited time:** January 10, 2019, 22:51 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSIoTEventsFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "iotevents:*"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSIoTSiteWiseFullAccess

Description: Provides full access to IoT SiteWise.

AWSIoTSiteWiseFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSIoTSiteWiseFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** December 04, 2018, 20:53 UTC
- **Edited time:** December 04, 2018, 20:53 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSIoTSiteWiseFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "iotsitewise:*"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSLambdaDynamoDBExecutionRole

Description: Provides list and read access to DynamoDB streams and write permissions to CloudWatch logs.

AWSLambdaDynamoDBExecutionRole is an [AWS managed policy](#).

Using this policy

You can attach AWSLambdaDynamoDBExecutionRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** April 09, 2015, 15:09 UTC
- **Edited time:** April 09, 2015, 15:09 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSLambdaDynamoDBExecutionRole

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "dynamodb:DescribeStream",  
                "dynamodb:GetRecords",  
                "dynamodb:GetShardIterator",  
                "dynamodb>ListStreams",  
                "logs>CreateLogGroup",  
                "logs>CreateLogStream",  
                "logs:PutLogEvents"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSLicenseManagerLinuxSubscriptionsServiceRolePolicy

Description: Allows AWS License Manager Linux Subscriptions Service to manage resources on your behalf.

`AWSLicenseManagerLinuxSubscriptionsServiceRolePolicy` is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 20, 2022, 18:54 UTC
- **Edited time:** July 08, 2024, 22:04 UTC
- **ARN:** `arn:aws:iam::aws:policy/aws-service-role/AWSLicenseManagerLinuxSubscriptionsServiceRolePolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSM2ServicePolicy

Description: Allows AWS M2 to manage AWS resources on your behalf.

AWSM2ServicePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 07, 2022, 20:26 UTC
- **Edited time:** June 07, 2022, 20:26 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSM2ServicePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSMarketplaceGetEntitlements

Description: Provides read access to AWS Marketplace Entitlements

AWSMarketplaceGetEntitlements is an [AWS managed policy](#).

Using this policy

You can attach AWSMarketplaceGetEntitlements to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 27, 2017, 19:37 UTC
- **Edited time:** April 05, 2024, 01:27 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSMarketplaceGetEntitlements

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AWSMarketplaceGetEntitlements",  
            "Effect" : "Allow",  
            "Action" : [  
                "aws-marketplace:GetEntitlements"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSMarketplaceImageBuildFullAccess

Description: Provides full access to AWS Marketplace Private Image Build Feature. In addition to create private images, it also provides permissions to add tags to images, launch and terminate ec2 instances.

AWSMarketplaceImageBuildFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSMarketplaceImageBuildFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** July 31, 2018, 23:29 UTC
- **Edited time:** March 04, 2022, 17:05 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSMarketplaceImageBuildFullAccess

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSMarketplaceResaleAuthorizationServiceRolePolicy

Description: Enables access to AWS services and Resources used or managed by AWS Marketplace for Resale Authorization.

AWSMarketplaceResaleAuthorizationServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** March 05, 2024, 18:47 UTC
- **Edited time:** March 05, 2024, 18:47 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSMarketplaceResaleAuthorizationServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSMigrationHubRefactorSpaces-SSMAutomationPolicy

Description: Use in the IAM service role passed to the SSM Automation document AWSRefactorSpaces-CreateResources to grant permissions required to run the automation. The policy grants read/write access to EC2 tags in order to track automation progress. When the Refactor Spaces environment's network bridge is enabled, the automation also adds the environment's security group to the EC2 instance to permit traffic from other Refactor Spaces services in the environment. The policy also grants access to the Application Migration Service's post launch actions SSM parameters.

AWSMigrationHubRefactorSpaces-SSMAutomationPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSMigrationHubRefactorSpaces-SSMAutomationPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** August 10, 2023, 15:08 UTC
- **Edited time:** August 10, 2023, 15:08 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSMigrationHubRefactorSpaces-SSMAutomationPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSMigrationHubRefactorSpacesServiceRolePolicy

Description: Provides access to AWS Resources managed or used by AWS Migration Hub Refactor Spaces.

AWSMigrationHubRefactorSpacesServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 29, 2021, 06:50 UTC
- **Edited time:** July 20, 2023, 15:57 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSMigrationHubRefactorSpacesServiceRolePolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSMigrationHubSMSAccess

Description: Policy for Server Migration Service to assume role in customer's account to call Migration Hub

AWSMigrationHubSMSAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSMigrationHubSMSAccess to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** August 14, 2017, 13:57 UTC
- **Edited time:** October 07, 2019, 18:01 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSMigrationHubSMSAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Action" : [  
        "mgh>CreateProgressUpdateStream"  
      ],  
      "Effect" : "Allow",  
      "Resource" : "arn:aws:mgh:*:*:progressUpdateStream/SMS"  
    },  
    {  
      "Action" : [  
        "mgh:DeleteProgressUpdateStream"  
      ],  
      "Effect" : "Allow",  
      "Resource" : "arn:aws:mgh:*:*:progressUpdateStream/SMS"  
    }  
  ]  
}
```

AWSMigrationHubStrategyCollector

Description: Grants permissions to allow communication with the AWS Migration Hub Strategy Recommendations service, read/write access to S3 buckets related to the service, Amazon API Gateway access to upload logs and metrics to AWS, AWS Secrets Manager access to fetch credentials, and any related services.

AWSMigrationHubStrategyCollector is an [AWS managed policy](#).

Using this policy

You can attach AWSMigrationHubStrategyCollector to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 19, 2021, 20:15 UTC
- **Edited time:** April 01, 2024, 16:21 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSMigrationHubStrategyCollector

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSMigrationHubStrategyServiceRolePolicy

Description: Enable access to AWS Resources used or managed by AWS Migration Hub Strategy Recommendations service.

AWSMigrationHubStrategyServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 19, 2021, 20:02 UTC

- **Edited time:** October 19, 2021, 20:02 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSMigrationHubStrategyServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "s3>ListBucket",
        "s3PutObject",
        "s3PutObjectAcl"
    ],
    "Resource" : "arn:aws:s3:::migrationhub-strategy-*"
}

AWSNetworkFirewallServiceRolePolicy

Description: Allow AWSNetworkFirewall to create and manage necessary resources for your Firewalls.

`AWSNetworkFirewallServiceRolePolicy` is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** November 17, 2020, 17:17 UTC
 - **Edited time:** March 30, 2023, 17:19 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSNetworkFirewallServiceRolePolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

AWSOpsWorksInstanceRegistration

Description: Provides access for an Amazon EC2 instance to register with an AWS OpsWorks stack.

AWSOpsWorksInstanceRegistration is an [AWS managed policy](#).

Using this policy

You can attach AWSOpsWorksInstanceRegistration to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 03, 2016, 14:23 UTC
- **Edited time:** June 03, 2016, 14:23 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSOpsWorksInstanceRegistration

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "opsworks:DescribeStackProvisioningParameters",  
                "opsworks:DescribeStacks",  
                "opsworks:RegisterInstance"  
            ],  
            "Resource" : [  
                "*"  
            ]  
        }  
    ]  
}
```

AWSPanoramaGreengrassGroupRolePolicy

Description: Allows an AWS Lambda function on an AWS Panorama Appliance to manage resources in Panorama, upload logs and metrics to Amazon CloudWatch, and to manage objects in buckets created for use with Panorama.

AWSPanoramaGreengrassGroupRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSPanoramaGreengrassGroupRolePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** December 01, 2020, 13:10 UTC
- **Edited time:** January 06, 2021, 19:30 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSPanoramaGreengrassGroupRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AWSProtonReadOnlyAccess

Description: Provides read only access to the AWS Proton APIs and Management Console.

AWSProtonReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSProtonReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 17, 2021, 19:09 UTC
- **Edited time:** November 18, 2022, 18:28 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSProtonReadOnlyAccess

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSQuickSetupDevOpsGuruPermissionsBoundary

Description: The AWSQuickSetupDevOpsGuruPermissionsBoundary policy defines the list of permissions that are permitted in an IAM role created by Quick Setup. Quick Setup uses a role created with this policy to enable and configure Amazon DevOps Guru. This policy also provides permissions to enable Systems Manager Explorer.

AWSQuickSetupDevOpsGuruPermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AWSQuickSetupDevOpsGuruPermissionsBoundary to your users, groups, and roles.

AWSQuickSetupEnableDHMCExecutionPolicy

Description: This policy grants permissions that allow principals to run the AWSQuickSetupType-EnableDHMC Automation runbook, which enables Default Host Management Configuration.

AWSQuickSetupEnableDHMCExecutionPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AWSQuickSetupEnableDHMCExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 15, 2024, 21:27 UTC
- **Edited time:** November 15, 2024, 21:27 UTC
- **ARN:** `arn:aws:iam::aws:policy/AWSQuickSetupEnableDHMCExecutionPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSQuickSetupPatchPolicyPermissionsBoundary

Description: QuickSetup creates IAM roles which enable it to configure the Systems Manager Patch Manager feature on your behalf, and uses this policy when creating such roles to define the boundary of their permissions.

AWSQuickSetupPatchPolicyPermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AWSQuickSetupPatchPolicyPermissionsBoundary to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 26, 2024, 09:46 UTC
- **Edited time:** June 26, 2024, 09:46 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSQuickSetupPatchPolicyPermissionsBoundary

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSQuickSetupSchedulerPermissionsBoundary

Description: The AWSQuickSetupSchedulerPermissionsBoundary policy defines the list of permissions that are permitted in an IAM role created by Quick Setup. Quick Setup uses a role created with this policy to enable and configure scheduled operations on Amazon EC2 instances and other resources.

AWSQuickSetupSchedulerPermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AWSQuickSetupSchedulerPermissionsBoundary to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 26, 2024, 09:53 UTC
- **Edited time:** June 26, 2024, 09:53 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSQuickSetupSchedulerPermissionsBoundary

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSQuickSetupSSMDeploymentRolePolicy

Description: This policy grants administrative permissions that allow Quick Setup to create resources that are used during the Systems Manager onboarding process.

AWSQuickSetupSSMDeploymentRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSQuickSetupSSMDeploymentRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 15, 2024, 22:53 UTC
- **Edited time:** November 20, 2024, 12:43 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSQuickSetupSSMDeploymentRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSQuickSetupSSMDeploymentS3BucketRolePolicy

Description: This policy grants permissions for listing all S3 buckets in an account; and for managing and retrieving information about specific buckets in the principal account that are managed through AWS CloudFormation templates.

AWSQuickSetupSSMDeploymentS3BucketRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSQuickSetupSSMDeploymentS3BucketRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 15, 2024, 22:01 UTC
- **Edited time:** November 15, 2024, 22:01 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSQuickSetupSSMDeploymentS3BucketRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSRefactoringToolkitFullAccess

Description: This policy grants permission to use AWS services with the AWS Toolkit for .NET Refactoring extension for Microsoft Visual Studio. It is intended to be attached to a local AWS profile. The policy allows uploading application artifacts and downloading the resulting artifacts from Amazon S3. It allows building applications into a container image using AWS CodeBuild and storing and retrieving the images from Amazon Elastic Container Registry (Amazon ECR). And it allows deployment of the application to container services on AWS such as Amazon Elastic Container Service (Amazon ECS), optional creation of VPC resources, optional connection to existing infrastructure such as AWS Directory Service, and other related services.

AWSRefactoringToolkitFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSRefactoringToolkitFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 25, 2022, 16:41 UTC

- **Edited time:** March 25, 2024, 18:43 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSRefactoringToolkitFullAccess

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSRefactoringToolkitSidecarPolicy

Description: This policy is intended to be used by Amazon ECS Tasks created for testing applications in AWS using the AWS Toolkit for .NET Refactoring extension for Microsoft Visual Studio. The policy grants access to download application artifacts from Amazon S3, communicate the status of the Task using AWS Systems Manager, and other required services.

AWSRefactoringToolkitSidecarPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSRefactoringToolkitSidecarPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 25, 2022, 16:41 UTC
- **Edited time:** October 29, 2022, 22:15 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSRefactoringToolkitSidecarPolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Sid" : "SsmMessagesAccess",

AWSrePostPrivateCloudWatchAccess

Description: Provides re:Post Private access to publish CloudWatch metrics data

AWSRePostPrivateCloudWatchAccess is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 15, 2023, 16:37 UTC
- **Edited time:** November 15, 2023, 16:37 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSRePostPrivateCloudWatchAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "CloudWatchPublishMetrics",  
            "Effect" : "Allow",  
            "Action" : [  
                "cloudwatch:PutMetricData"  
            ],  
            "Resource" : "*",  
            "Condition" : {  
                "StringEquals" : {  
                    "cloudwatch:namespace" : [  
                        "AWS/rePostPrivate",  
                        "AWS/rePostPublic"  
                    ]  
                }  
            }  
        }  
    ]  
}
```

```
        "AWS/Usage"
    ]
}
}
]
}
```

AWSRepostSpaceSupportOperationsPolicy

Description: This policy allows the re:Post Space service to create, manage, and resolve Support cases that are created through the Space application.

AWSRepostSpaceSupportOperationsPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSRepostSpaceSupportOperationsPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 26, 2023, 21:52 UTC
- **Edited time:** November 26, 2023, 21:52 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSRepostSpaceSupportOperationsPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {

AWSResilienceHubAssessmentExecutionPolicy

Description: Policy for AWS Resilience Hub service role which allows access to other AWS services in order to execute assessment.

AWSResilienceHubAssessmentExecutionPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSResilienceHubAssessmentExecutionPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** June 27, 2023, 12:32 UTC
 - **Edited time:** September 17, 2024, 13:08 UTC
 - **ARN:** arn:aws:iam::aws:policy/AWSResilienceHubAssessmentExecutionPolicy

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSResourceGroupsReadOnlyAccess

Description: This is the read only policy for AWS Resource Groups

AWSResourceGroupsReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSResourceGroupsReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 07, 2018, 10:27 UTC
- **Edited time:** February 05, 2019, 17:56 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSResourceGroupsReadOnlyAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSRoboMaker_FullAccess

Description: Provides full access to AWS RoboMaker via the AWS Management Console and SDK. Also provides select access to related services (e.g., S3, IAM).

AWSRoboMaker_FullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSRoboMaker_FullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy

- **Creation time:** September 10, 2020, 18:34 UTC
- **Edited time:** September 16, 2021, 21:06 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSRoboMaker_FullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSRoboMakerServiceRolePolicy

Description: RoboMaker service policy

AWSRoboMakerServiceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSRoboMakerServiceRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 26, 2018, 05:33 UTC
- **Edited time:** November 26, 2018, 05:33 UTC

- ARN: arn:aws:iam::aws:policy/AWSRoboMakerServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "lambda:UpdateFunctionConfiguration"
    ],
    "Effect" : "Allow",
    "Resource" : "arn:aws:lambda:*:*:function:aws-robomaker-*"
},

AWSServiceCatalogOrgsDataSyncServiceRolePolicy

Description: A Service Linked Role Policy for AWS ServiceCatalog to sync with AWS Organizations organization structure

AWSServiceCatalogOrgsDataSyncServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** April 10, 2023, 20:48 UTC
- **Edited time:** April 10, 2023, 20:48 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSServiceCatalogOrgsDataSyncServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AWSServiceRoleForEC2ScheduledInstances

Description: Allows EC2 Scheduled Instances to launch and manage spot instances.

AWSServiceRoleForEC2ScheduledInstances is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 12, 2017, 18:31 UTC
- **Edited time:** October 12, 2017, 18:31 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSServiceRoleForEC2ScheduledInstances

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSServiceRoleForIoTSiteWise

Description: Allows AWS IoT SiteWise to provision and manage gateways as well as query data. The policy includes required AWS Greengrass permissions for deploying to groups, AWS Lambda permissions for creating and updating service-prefixed functions, and AWS IoT Analytics permissions for querying data from datastores.

AWSServiceRoleForIoTSiteWise is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 14, 2018, 19:19 UTC
- **Edited time:** November 13, 2023, 18:27 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSServiceRoleForIoTSiteWise

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSServiceRoleForMonitronPolicy

Description: Grants Amazon Monitron permissions to manage AWS resources, including AWS SSO user assignment on your behalf.

`AWSServiceRoleForMonitronPolicy` is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** December 02, 2020, 19:06 UTC
 - **Edited time:** October 02, 2024, 10:06 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSServiceRoleForMonitronPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "sso-directory:SearchUsers",
        "sso>CreateApplicationAssignment",
        "sso>ListApplicationAssignments"
    ],
    "Resource" : "*"
}
]
```

AWSServiceRolePolicyForBackupRestoreTesting

Description: This policy contains permissions for testing restores and for cleaning up resources created during tests.

AWSServiceRolePolicyForBackupRestoreTesting is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 10, 2023, 23:37 UTC
- **Edited time:** February 14, 2024, 22:42 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSServiceRolePolicyForBackupRestoreTesting

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AWSSSMOpsInsightsServiceRolePolicy

Description: Policy for Service Linked Role AWSServiceRoleForAmazonSSM_OpsInsights

AWSSSMOpsInsightsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 16, 2021, 20:12 UTC
- **Edited time:** June 16, 2021, 20:12 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSSSMOpsInsightsServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AllowCreateOpsItem",  
            "Effect" : "Allow",  
            "Action" : [  
                "ssm>CreateOpsItem",  
                "ssm>AddTagsToResource"  
            ],  
            "Resource" : "*"  
        },  
        {  
            "Sid" : "AllowAccessOpsItem",  
            "Effect" : "Allow",  
            "Action" : [  
                "ssm>UpdateOpsItem",  
                "ssm>GetOpsItem"  
            ],  
            "Resource" : "*",  
            "Condition" : {  
                "StringEquals" : {  
                    "AWS:SourceArn" : "arn:aws:ssm:  
                }  
            }  
        }  
    ]  
}
```

```
        "StringEquals" : {
            "aws:ResourceTag/SsmOperationalInsight" : "true"
        }
    }
}

AWSSSODirectoryAdministrator

Description: Administrator access for SSO Directory

`AWSSSODirectoryAdministrator` is an [AWS managed policy](#).

Using this policy

You can attach `AWSSSODirectoryAdministrator` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 31, 2018, 23:54 UTC
- **Edited time:** October 20, 2022, 20:34 UTC
- **ARN:** `arn:aws:iam::aws:policy/AWSSSODirectoryAdministrator`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AWSSSODirectoryAdministrator",  
            "Effect" : "Allow",  
            "Action" : [  
                "sso-directory:*",  
                "identitystore:*",  
                "identitystore-auth:*",  
                "sso>ListDirectoryAssociations"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSStepFunctionsConsoleFullAccess

Description: An access policy for providing a user/role/etc access to the AWS StepFunctions console. For a full console experience, in addition to this policy, a user may need iam:PassRole permission on other IAM roles that can be assumed by the service.

AWSStepFunctionsConsoleFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSStepFunctionsConsoleFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 11, 2017, 21:54 UTC
- **Edited time:** January 12, 2017, 00:19 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSStepFunctionsConsoleFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [

AWSSupportPlansFullAccess

Description: Provides full access to supportplans.

AWSSupportPlansFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSSupportPlansFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 27, 2022, 18:19 UTC
- **Edited time:** September 09, 2024, 21:15 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSSupportPlansFullAccess

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "supportplans:GetSupportPlan",  
                "supportplans:GetSupportPlanUpdateStatus",  
                "supportplans>ListSupportPlanModifiers",  
                "supportplans:StartSupportPlanUpdate",  
                "supportplans>CreateSupportPlanSchedule"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWS*SupportPlans*ReadOnlyAccess

Description: Provides read-only access to supportplans.

AWS*SupportPlans*ReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AWS*SupportPlans*ReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 27, 2022, 18:08 UTC
- **Edited time:** September 09, 2024, 21:21 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSSupportPlansReadOnlyAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "supportplans:GetSupportPlan",  
        "supportplans:GetSupportPlanUpdateStatus",  
        "supportplans>ListSupportPlanModifiers"  
      ],  
      "Resource" : "*"  
    }  
  ]  
}
```

- [Get started with AWS managed policies and move toward least-privilege permissions](#)

AWSSupportServiceRolePolicy

Description: Allows AWS Support to access AWS resources to provide billing, administrative, and support services.

AWSSupportServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** April 19, 2018, 18:04 UTC
- **Edited time:** October 10, 2024, 18:03 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSSupportServiceRolePolicy

Policy version

Policy version: v38 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AWSSystemsManagerAccountDiscoveryServicePolicy

Description: Grants AWS Systems Manager (SSM) permission to discover AWS account information.

AWSSystemsManagerAccountDiscoveryServicePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy

- **Creation time:** October 24, 2019, 17:21 UTC
- **Edited time:** October 17, 2022, 20:25 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSSystemsManagerAccountDiscoveryServicePolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "organizations:DescribeAccount",

AWSSystemsManagerChangeManagementServicePolicy

Description: Provides access to AWS resources managed or used by the AWS Systems Manager change management framework.

AWSSystemsManagerChangeManagementServicePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 07, 2020, 22:21 UTC
- **Edited time:** December 07, 2020, 22:21 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSSystemsManagerChangeManagementServicePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSSystemsManagerEnableExplorerExecutionPolicy

Description: This policy grants administrative permissions for enabling Explorer, a capability of AWS Systems Manager. This includes permissions to update related Systems Manager service settings, and to create a service-linked role for Systems Manager.

AWSSystemsManagerEnableExplorerExecutionPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSSystemsManagerEnableExplorerExecutionPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 26, 2024, 09:42 UTC
- **Edited time:** June 26, 2024, 09:42 UTC
- **ARN:** arn:aws:iam::aws:policy/
AWSSystemsManagerEnableExplorerExecutionPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSThinkboxAWSPortalGatewayPolicy

Description: This policy grants the AWS Portal Gateway machine the necessary permissions required for normal operation.

AWSThinkboxAWSPortalGatewayPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSThinkboxAWSPortalGatewayPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 27, 2020, 19:05 UTC
- **Edited time:** June 30, 2020, 16:02 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSThinkboxAWSPortalGatewayPolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AWSThinkboxAWSPortalWorkerPolicy

Description: This policy grants the Deadline Workers in AWS Portal the necessary permissions required for normal operation.

AWSThinkboxAWSPortalWorkerPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSThinkboxAWSPortalWorkerPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 27, 2020, 19:15 UTC
- **Edited time:** December 07, 2020, 23:27 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSThinkboxAWSPortalWorkerPolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AWSThinkboxDeadlineSpotEventPluginAdminPolicy

Description: Grants permissions required for AWS Thinkbox's Deadline Spot Event Plugin. This includes permission to request, modify, and cancel a spot fleet, as well as limited PassRole permission.

AWSThinkboxDeadlineSpotEventPluginAdminPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSThinkboxDeadlineSpotEventPluginAdminPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 27, 2020, 19:38 UTC
- **Edited time:** May 27, 2020, 19:38 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSThinkboxDeadlineSpotEventPluginAdminPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AWSVPCS2SVpnServiceRolePolicy

Description: Allow Site-to-Site VPN to create and manage resources related to your VPN Connections.

AWSVPCS2SVpnServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** August 06, 2019, 14:13 UTC
- **Edited time:** August 06, 2019, 14:13 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSVPCS2SVpnServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "0",
      "Effect" : "Allow",
      "Action" : [
        "acm:ExportCertificate",
        "acm:DescribeCertificate",
        "acm>ListCertificates",
        "acm-pca:DescribeCertificateAuthority"
      ],
      "Resource" : "*"
    }
  ]
}
```

AWSXRayDaemonWriteAccess

Description: Allow the AWS X-Ray Daemon to relay raw trace segments data to the service's API and retrieve sampling data (rules, targets, etc.) to be used by the X-Ray SDK.

AWSXRayDaemonWriteAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSXRayDaemonWriteAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** August 28, 2018, 23:00 UTC
- **Edited time:** February 13, 2024, 21:58 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSXRayDaemonWriteAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

CertificateManagerServiceRolePolicy

Description: Amazon Certificate Manager Service Role Policy

CertificateManagerServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 25, 2020, 17:56 UTC
- **Edited time:** June 25, 2020, 17:56 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/CertificateManagerServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "acm-pca:IssueCertificate",
        "acm-pca:GetCertificate"
      ],
      "Resource" : "*"
    }
  ]
}
```

CloudWatchApplicationInsightsReadOnlyAccess

Description: Provides read only access to CloudWatch Application Insights.

CloudWatchApplicationInsightsReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach CloudWatchApplicationInsightsReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 24, 2020, 18:48 UTC
- **Edited time:** November 24, 2020, 18:48 UTC
- **ARN:** arn:aws:iam::aws:policy/CloudWatchApplicationInsightsReadOnlyAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "applicationinsights:Describe*",  
                "applicationinsights>List*"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

CloudwatchApplicationInsightsServiceLinkedRolePolicy

Description: Cloudwatch Application Insights Service Linked Role Policy

CloudwatchApplicationInsightsServiceLinkedRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 01, 2018, 16:22 UTC
- **Edited time:** July 25, 2024, 16:24 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/CloudwatchApplicationInsightsServiceLinkedRolePolicy

Policy version

Policy version: v25 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

CloudWatchApplicationSignalsServiceRolePolicy

Description: Policy grants permission to CloudWatch Application Signals to collect monitoring and tagging data from other relevant AWS services.

CloudWatchApplicationSignalsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 09, 2023, 18:09 UTC
- **Edited time:** April 26, 2024, 21:29 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/CloudWatchApplicationSignalsServiceRolePolicy

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

CloudWatchEventsInvocationAccess

Description: Allows Amazon CloudWatch Events to relay events to the streams in AWS Kinesis Streams in your account.

CloudWatchEventsInvocationAccess is an [AWS managed policy](#).

Using this policy

You can attach CloudWatchEventsInvocationAccess to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** January 14, 2016, 18:36 UTC
- **Edited time:** January 14, 2016, 18:36 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/CloudWatchEventsInvocationAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {
```

```
        "Sid" : "CloudWatchEventsInvocationAccess",
        "Effect" : "Allow",
        "Action" : [
            "kinesis:PutRecord"
        ],
        "Resource" : "*"
    }
]
}
```

DataScientist

Description: Grants permissions to AWS data analytics services.

DataScientist is an [AWS managed policy](#).

Using this policy

You can attach DataScientist to your users, groups, and roles.

Policy details

- **Type:** Job function policy
- **Creation time:** November 10, 2016, 17:28 UTC
- **Edited time:** December 03, 2019, 16:48 UTC
- **ARN:** arn:aws:iam::aws:policy/job-function/DataScientist

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

EC2FleetTimeShiftableServiceRolePolicy

Description: Policy granting permissions to EC2 Fleet to launch instances in the future.

EC2FleetTimeShiftableServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 23, 2019, 19:47 UTC
- **Edited time:** December 23, 2019, 19:47 UTC

- **ARN:** arn:aws:iam::aws:policy/aws-service-role/EC2FleetTimeShiftableServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

- **ARN:** `arn:aws:iam::aws:policy/aws-service-role/EMRDescribeClusterPolicyForEMRWAL`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "elasticmapreduce:DescribeCluster"  
      ],  
      "Resource" : "*"  
    }  
  ]  
}
```

FMSServiceRolePolicy

Description: Access policy to allow FM service linked role to perform FM-related actions on FM-managed resources within a customer AWS Organization account.

FMSServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** March 28, 2018, 23:01 UTC
- **Edited time:** July 22, 2024, 20:08 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/FMSServiceRolePolicy

Policy version

Policy version: v30 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

FSxDeleteServiceLinkedRoleAccess

Description: Allows Amazon FSx to delete its Service Linked Roles for Amazon S3 access

FSxDeleteServiceLinkedRoleAccess is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 28, 2018, 10:40 UTC
- **Edited time:** November 28, 2018, 10:40 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/FSxDeleteServiceLinkedRoleAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "iam:DeleteServiceLinkedRole",  
        "iam:GetServiceLinkedRoleDeletionStatus",  
        "iam:ListServiceLinkedRoles",  
        "iam:PutServiceLinkedRoleDeletionStatus"  
      ]  
    }  
  ]  
}
```

```
    "iam:GetRole"
  ],
  "Resource" : "arn:*:iam::role/aws-service-role/s3.data-
source.lustre.fsx.amazonaws.com/AWSServiceRoleForFSxS3Access_"
}

MigrationHubSMSAccessServiceRolePolicy

Description: Policy for Server Migration Service to assume role in customer's account to call Migration Hub

MigrationHubSMSAccessServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 12, 2019, 18:30 UTC
- **Edited time:** October 07, 2019, 18:02 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/MigrationHubSMSAccessServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : "mgh>CreateProgressUpdateStream",  
            "Resource" : "arn:aws:mgh:*:*:progressUpdateStream/SMS"  
        },  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "mgh:DescribeMigrationTask",  
                "mgh:AssociateDiscoveredResource",  
                "mgh>ListDiscoveredResources",  
                "mgh:ImportMigrationTask",

NeptuneConsoleFullAccess

Description: Provides full access to manage Amazon Neptune using the AWS Management Console. Note this policy also grants full access to publish on all SNS topics within the account, permissions to create and edit Amazon EC2 instances and VPC configurations, permissions to view and list keys on Amazon KMS, and full access to Amazon RDS. For more information, see <https://aws.amazon.com/neptune/faqs/>.

NeptuneConsoleFullAccess is an [AWS managed policy](#).

Using this policy

You can attach NeptuneConsoleFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 19, 2018, 21:35 UTC
- **Edited time:** November 30, 2023, 07:32 UTC
- **ARN:** arn:aws:iam::aws:policy/NeptuneConsoleFullAccess

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

NetworkAdministrator

Description: Grants full access permissions to AWS services and actions required to set up and configure AWS network resources.

NetworkAdministrator is an [AWS managed policy](#).

Using this policy

You can attach NetworkAdministrator to your users, groups, and roles.

Policy details

- **Type:** Job function policy
 - **Creation time:** November 10, 2016, 17:31 UTC
 - **Edited time:** June 26, 2024, 16:53 UTC
 - **ARN:** arn:aws:iam::aws:policy/job-function/NetworkAdministrator

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

OAMFullAccess

Description: Provides full access to CloudWatch Observability Access Manager

OAMFullAccess is an [AWS managed policy](#).

Using this policy

You can attach OAMFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 27, 2022, 13:38 UTC
- **Edited time:** November 27, 2022, 13:38 UTC
- **ARN:** arn:aws:iam::aws:policy/OAMFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "oam:*"  
      ],  
      "Resource" : "*"  
    }  
  ]  
}
```

OAMReadOnlyAccess

Description: Provides Read Only access to CloudWatch Observability Access Manager

OAMReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach OAMReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 27, 2022, 13:29 UTC
- **Edited time:** November 27, 2022, 13:29 UTC
- **ARN:** arn:aws:iam::aws:policy/OAMReadOnlyAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "oam:Get*",
        "oam>List*"
      ],
      "Resource" : "*"
    }
  ]
}
```

OpensearchIngestionSelfManagedVpcePolicy

Description: Allows Amazon OpenSearch Ingestion to describe network resources and write service metrics to cloudwatch

OpensearchIngestionSelfManagedVpcePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** June 10, 2024, 19:59 UTC
- **Edited time:** June 10, 2024, 19:59 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/OpensearchIngestionSelfManagedVpcePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

QAppsServiceRolePolicy

Description: Grants permissions to AWS services and Resources used or managed by Amazon Q Apps.

QAppsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** September 26, 2024, 19:22 UTC
- **Edited time:** September 26, 2024, 19:22 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/QAppsServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Sid" : "QAppsPutMetricDataPermission",  
      "Effect" : "Allow",  
      "Action" : "Metrics:PutMetricData",  
      "Resource" : "*"  
    }  
  ]  
}
```

```
"Action" : [
    "cloudwatch:PutMetricData"
],
"Resource" : "*",
"Condition" : {
    "StringEquals" : {
        "cloudwatch:namespace" : "AWS/QApps"
    }
}
}
```

QuickSightAccessForS3StorageManagementAnalyticsReadOnly

Description: Policy used by QuickSight team to access customer data produced by S3 Storage Management Analytics.

QuickSightAccessForS3StorageManagementAnalyticsReadOnly is an [AWS managed policy](#).

Using this policy

You can attach `QuickSightAccessForS3StorageManagementAnalyticsReadOnly` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** June 12, 2017, 18:18 UTC
- **Edited time:** October 08, 2019, 23:53 UTC
- **ARN:** `arn:aws:iam::aws:policy/service-role/QuickSightAccessForS3StorageManagementAnalyticsReadOnly`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "s3:GetObject"
      ],
      "Resource" : [
        "arn:aws:s3:::s3-analytics-export-shared-*"
      ]
    },
    {
      "Action" : [
        "s3:GetAnalyticsConfiguration",
        "s3>ListAllMyBuckets",
        "s3:GetBucketLocation"
      ]
    }
  ]
}
```

```
  ],
  "Effect" : "Allow",
  "Resource" : "*"
}
]
}
```

RDSCloudHsmAuthorizationRole

Description: Default policy for the Amazon RDS service role.

RDSCloudHsmAuthorizationRole is an [AWS managed policy](#).

Using this policy

You can attach RDSCloudHsmAuthorizationRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** September 26, 2019, 22:14 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/RDSCloudHsmAuthorizationRole

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "cloudhsm>CreateLunaClient",  
                "cloudhsm>DeleteLunaClient",  
                "cloudhsm>DescribeHapg",  
                "cloudhsm>DescribeLunaClient",  
                "cloudhsm>GetConfig",  
                "cloudhsm>ModifyHapg",  
                "cloudhsm>ModifyLunaClient"  
            ],  
            "Resource" : "*"  
        }

ReadOnlyAccess

Description: Provides read-only access to AWS services and resources.

ReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach ReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** February 06, 2015, 18:39 UTC
 - **Edited time:** November 19, 2024, 16:06 UTC
 - **ARN:** arn:aws:iam::aws:policy/ReadOnlyAccess

Policy version

Policy version: v122 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ResourceGroupsandTagEditorFullAccess

Description: Provides full access to Resource Groups and Tag Editor.

ResourceGroupsandTagEditorFullAccess is an [AWS managed policy](#).

Using this policy

You can attach ResourceGroupsandTagEditorFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:39 UTC
- **Edited time:** August 10, 2023, 13:29 UTC
- **ARN:** arn:aws:iam::aws:policy/ResourceGroupsandTagEditorFullAccess

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "tag:getResources",  
        "tag:getTagKeys",  
        "tag:getTagValues",  
        "tag:TagResources",  
        "tag:UntagResources",  
        "resource-groups:*",  
        "cloudformation:DescribeStacks",  
        "cloudformation>ListStackResources",  
        "cloudformation>ListStacks"  
      ],  
      "Resource" : "*"  
    }  
  ]  
}
```

ResourceGroupsandTagEditorReadOnlyAccess

Description: Provides access to use Resource Groups and Tag Editor, but does not allow editing of tags via the Tag Editor.

ResourceGroupsandTagEditorReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach `ResourceGroupsandTagEditorReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:39 UTC
- **Edited time:** August 10, 2023, 13:42 UTC
- **ARN:** `arn:aws:iam::aws:policy/ResourceGroupsandTagEditorReadOnlyAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "tag:getResources",  
                "tag:getTagKeys",  
                "tag:getTagValues",  
                "resource-groups:Get*",  
                "resource-groups>List*",  
                "resource-groups/Search*",  
                "cloudformation:DescribeStacks",  
                "cloudformation>ListStackResources",  
                "cloudformation>ListStacks"  
            ],  
            "Resource" : "*"  
        }  
    ]}
```

]
}

ResourceGroupsServiceRolePolicy

Description: Allows AWS Resource Groups to query the AWS services that own your resources to keep the group up-to-date

ResourceGroupsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** January 05, 2023, 16:57 UTC
- **Edited time:** January 05, 2023, 16:57 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/
ResourceGroupsServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "tag:GetResources",  
                "cloudformation:DescribeStacks",  
                "cloudformation>ListStackResources"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

ResourceGroupsTaggingAPITagUntagSupportedResources

Description: Provides permissions to tag and untag all the resources supported by Resource Groups Tagging API. This policy also grants the permissions required to retrieve all tagged, or previously tagged, resources through the Resource Groups Tagging API.

ResourceGroupsTaggingAPITagUntagSupportedResources is an [AWS managed policy](#).

Using this policy

You can attach ResourceGroupsTaggingAPITagUntagSupportedResources to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 11, 2024, 11:11 UTC

- **Edited time:** October 11, 2024, 11:11 UTC
 - **ARN:** arn:aws:iam::aws:policy/
ResourceGroupsTaggingAPITagUntagSupportedResources

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSAAmazonEBSCSIDriverOperatorPolicy

Description: Allows the OpenShift Amazon EBS Container Storage Interface (CSI) Driver Operator to install and maintain the Amazon EBS CSI driver on a Red Hat OpenShift Service on AWS (ROSA) cluster. The Amazon EBS CSI driver allows ROSA clusters to manage the lifecycle of Amazon EBS volumes for persistent volumes.

ROSAAmazonEBSCSIDriverOperatorPolicy is an [AWS managed policy](#).

Using this policy

You can attach ROSAAmazonEBSCSIDriverOperatorPolicy to your users, groups, and roles.

ROSACloudNetworkConfigOperatorPolicy

Description: Allows the OpenShift Cloud Network Config Controller Operator to provision and manage networking resources for use by the Red Hat OpenShift Service on AWS (ROSA) cluster networking overlay. The OpenShift Cloud Network Operator interfaces with AWS APIs on behalf of the network plugins via CustomResourceDefinitions. The operator uses these policy permissions to manage private IP addresses for Amazon EC2 instances as part of the ROSA cluster.

ROSACloudNetworkConfigOperatorPolicy is an [AWS managed policy](#).

ROSAKMSProviderPolicy

Description: Allows the built-in ROSA AWS Encryption Provider to manage AWS Key Management Service (KMS) keys to support etcd data encryption using a customer provided AWS KMS key. The policy allows encryption and decryption of data using KMS keys.

ROSAKMSProviderPolicy is an [AWS managed policy](#).

Using this policy

You can attach ROSAKMSProviderPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** April 27, 2023, 20:10 UTC
- **Edited time:** April 27, 2023, 20:10 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/ROSAKMSProviderPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "VolumeEncryption",  
            "Effect" : "Allow",  
            "Action" : [  
                "kms:Encrypt",

ROSAKubeControllerPolicy

Description: Allows the ROSA Kubernetes controller to manage Amazon EC2, Elastic Load Balancing (ELB), and AWS Key Management Service (KMS) resources for a ROSA cluster.

ROSAKubeControllerPolicy is an [AWS managed policy](#).

Using this policy

You can attach ROSAKubeControllerPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** April 27, 2023, 20:09 UTC
- **Edited time:** October 16, 2023, 18:17 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/ROSAKubeControllerPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

ROSANodePoolManagementPolicy

Description: Allows Red Hat OpenShift Service on AWS (ROSA) to manage cluster EC2 instances as worker nodes, including permission to configure security groups and tag instances and volumes. This policy also allows for the use of EC2 instances with disk encryption provided by AWS Key Management Service (KMS) keys.

ROSANodePoolManagementPolicy is an [AWS managed policy](#).

Using this policy

You can attach ROSANodePoolManagementPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** June 08, 2023, 20:48 UTC
- **Edited time:** May 02, 2024, 14:01 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/ROSANodePoolManagementPolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSASRESupportPolicy

Description: Provides ROSA site reliability engineering (SRE) the permissions needed to initially observe, diagnose, and support AWS resources associated with Red Hat OpenShift Service on AWS (ROSA) clusters, including the ability to change ROSA cluster node state.

ROSASRESupportPolicy is an [AWS managed policy](#).

Using this policy

You can attach ROSASRESupportPolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** June 01, 2023, 14:36 UTC
- **Edited time:** April 10, 2024, 20:51 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/ROSASRESupportPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

Route53ResolverServiceRolePolicy

Description: Enables access to AWS services and Resources used or managed by Route53 Resolver
Route53ResolverServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** August 12, 2020, 17:47 UTC
 - **Edited time:** August 12, 2020, 17:47 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/Route53ResolverServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "logs:DescribeLogGroups",
        "s3:GetBucketPolicy"
    ],
    "Effect" : "Allow",
    "Resource" : "*"
}
]
```

S3StorageLensServiceRolePolicy

Description: Enables access to AWS services and Resources used or managed by S3 Storage Lens

S3StorageLensServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 18, 2020, 18:15 UTC
- **Edited time:** November 18, 2020, 18:15 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/S3StorageLensServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AwsOrgsAccess",  
            "Effect" : "Allow",  
            "Action" : [  
                "organizations:DescribeOrganization",  
                "organizations>ListAccounts",  
                "organizations>ListAWSAccessForOrganization",  
                "organizations>ListDelegatedAdministrators"  
            ],  
            "Resource" : [  
                "*"  
            ]  
        }  
    ]  
}
```

SecretsManagerReadWrite

Description: Provides read/write access to AWS Secrets Manager via the AWS Management Console. Note: this excludes IAM actions, so combine with IAMFullAccess if rotation configuration is required.

SecretsManagerReadWrite is an [AWS managed policy](#).

Using this policy

You can attach `SecretsManagerReadWrite` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** April 04, 2018, 18:05 UTC
 - **Edited time:** February 22, 2024, 18:12 UTC
 - **ARN:** arn:aws:iam::aws:policy/SecretsManagerReadWrite

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
"kms>ListAliases",

SecurityAudit

Description: The security audit template grants access to read security configuration metadata. It is useful for software that audits the configuration of an AWS account.

SecurityAudit is an [AWS managed policy](#).

Using this policy

You can attach SecurityAudit to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** November 19, 2024, 17:51 UTC
- **ARN:** arn:aws:iam::aws:policy/SecurityAudit

Policy version

Policy version: v46 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

SecurityLakeResourceManagementServiceRolePolicy

Description: Provides access to manage resources created by Security Lake.

SecurityLakeResourceManagementServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 14, 2024, 22:10 UTC
- **Edited time:** November 14, 2024, 22:10 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/
SecurityLakeResourceManagementServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

ServerMigrationConnector

Description: Permissions to allow the AWS Server Migration Connector to migrate VMs to EC2. Allows communication with the AWS Server Migration Service, read/write access to S3 buckets starting with 'sms-b-' and 'import-to-ec2-' as well as the buckets used for AWS Server Migration Connector upgrade, AWS Server Migration Connector registration with AWS, and metrics upload to AWS.

ServerMigrationConnector is an [AWS managed policy](#).

Using this policy

You can attach ServerMigrationConnector to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 24, 2016, 21:45 UTC
- **Edited time:** October 24, 2016, 21:45 UTC
- **ARN:** arn:aws:iam::aws:policy/ServerMigrationConnector

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ServiceQuotasServiceRolePolicy

Description: Allows Service Quotas to create support cases on your behalf

ServiceQuotasServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy

- **Creation time:** May 22, 2019, 20:44 UTC
- **Edited time:** June 24, 2019, 14:52 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/ServiceQuotasServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {

TranslateFullAccess

Description: Provides full access to Amazon Translate.

TranslateFullAccess is an [AWS managed policy](#).

Using this policy

You can attach TranslateFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 27, 2018, 23:36 UTC
- **Edited time:** January 08, 2020, 21:22 UTC
- **ARN:** arn:aws:iam::aws:policy/TranslateFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Action" : [  
                "translate:*",  
                "comprehend:DetectDominantLanguage",

VMImportExportRoleForAWSConnector

Description: Default policy for the VM Import/Export service role, for customers using the AWS Connector. The VM Import/Export service assumes a role with this policy to fulfill virtual machine migration requests from the AWS Connector virtual appliance. (Note that the AWS Connector uses the "AWSConnector" managed policy to issue requests on the customer's behalf to the VM Import/Export service.) Provides the ability to create AMIs and EBS snapshots, modify EBS snapshot attributes, make "Describe*" calls on EC2 objects, and read from S3 buckets starting with 'import-to-ec2-'.

`VMIImportExportRoleForAWSConnector` is an [AWS managed policy](#).

Using this policy

You can attach `VMImportExportRoleForAWSConnector` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** September 03, 2015, 20:48 UTC
 - **Edited time:** September 03, 2015, 20:48 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/VMImportExportRoleForAWSConnector

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

VPCLatticeFullAccess

Description: Provides full access to Amazon VPC Lattice and access to dependency services.

VPCLatticeFullAccess is an [AWS managed policy](#).

Using this policy

You can attach VPCLatticeFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 30, 2023, 02:49 UTC
- **Edited time:** March 30, 2023, 02:49 UTC
- **ARN:** arn:aws:iam::aws:policy/VPCLatticeFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",
