What are AWS managed policies?

An AWS managed policy is a standalone policy that is created and administered by AWS. AWS managed policies are designed to provide permissions for many common use cases. They make it easier for you to get started with assigning permissions to users, groups, and roles than if you had to write the policies yourself.

Keep in mind that AWS managed policies might not grant least-privilege permissions for your specific use cases because they are available for use by all AWS customers. We recommend that you reduce permissions further by defining [customer managed policies](#) that are specific to your use cases.

You cannot change the permissions defined in AWS managed policies. If AWS updates the permissions defined in an AWS managed policy, the update affects all principal identities (users, groups, and roles) that the policy is attached to. AWS is most likely to update an AWS managed policy when a new AWS service is launched or new API operations become available for existing services.

For more information, see [AWS managed policies](#) in the IAM User Guide.

Understanding policy reference pages

Each policy reference page includes the following information:

- **Using this policy** – Whether you can attach the policy to users, groups, and roles
- **Policy details**
 - **Type** – The type of AWS managed policy
 - AWS managed policy – A standard AWS managed policy
 - Job function policy – Policy that aligns with common industry job functions
 - Service-linked role policy – Policy that is attached to a service-linked role that allows a service to perform actions on your behalf, such as [the section called "AmazonRDSPreviewServiceRolePolicy"](#)
 - Service role policy – Policy designed to work with service roles, such as [the section called "AWSControlTowerServiceRolePolicy"](#)
 - **Creation time** – When the policy was first created
 - **Edited time** – When this version of the policy was edited

- **ARN** – The Amazon Resource Name of the policy
- **Policy version** – The version of the permissions granted by the policy
- **JSON policy document** – The policy JSON
- **Learn more** – Links to documentation related to AWS managed policies

Deprecated AWS managed policies

AWS regularly updates AWS managed policies. In most cases, we add permissions to a policy. This happens when we launch a new service or feature. To improve the security of AWS managed policies, we sometimes reduce the scope of policies. When we remove permissions from a policy, we set the policy to a *deprecated* state and make a new one available. When AWS deprecates a service or feature, we also deprecate the AWS managed policy for that feature.

If you receive an email notification that a policy you are using is deprecated, we recommend that you immediately take action. Identify the change to the policy and update your workflows. If AWS provides a replacement policy, plan to attach it to all affected identities (users, groups, and roles) and then detach the deprecated policy from those identities.

A deprecated policy has the following characteristics:

- It is removed from this guide.
- Permissions continue to work for all *currently* attached identities.
- In accounts where the policy is attached to an identity, it appears in the **Policies** list in the IAM console with a warning icon next to it.
- It *cannot* be attached to any new identities. If you detach it from a current identity, you cannot reattach it.
- After you detach it from all current entities, it is no longer visible.

AccessAnalyzerServiceRolePolicy

Description: Allow Access Analyzer to analyze resource metadata

AccessAnalyzerServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 02, 2019, 17:13 UTC
- **Edited time:** October 29, 2024, 16:35 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AccessAnalyzerServiceRolePolicy

Policy version

Policy version: v14 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

Learn more

- [Understand versioning for IAM policies](#)
- [Get started with AWS managed policies and move toward least-privilege permissions](#)

AdministratorAccess

Description: Provides full access to AWS services and resources.

AdministratorAccess is an [AWS managed policy](#).

Using this policy

You can attach AdministratorAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:39 UTC

- **Edited time:** February 06, 2015, 18:39 UTC
- **ARN:** arn:aws:iam::aws:policy/AdministratorAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : "*",  
      "Resource" : "*"  
    }  
  ]  
}
```

AdministratorAccess-Amplify

Description: Grants account administrative permissions while explicitly allowing direct access to resources needed by Amplify applications.

AdministratorAccess-Amplify is an [AWS managed policy](#).

Using this policy

You can attach `AdministratorAccess`-`Amplify` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** December 01, 2020, 19:03 UTC
 - **Edited time:** April 04, 2024, 20:35 UTC
 - **ARN:** arn:aws:iam::aws:policy/AdministratorAccess-Amplify

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AdministratorAccess-AWSElasticBeanstalk

Description: Grants account administrative permissions. Explicitly allows developers and administrators to gain direct access to resources they need to manage AWS Elastic Beanstalk applications

AdministratorAccess-AWSElasticBeanstalk is an [AWS managed policy](#).

Using this policy

You can attach `AdministratorAccess`-`AWSAdministratorAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** January 22, 2021, 19:36 UTC
 - **Edited time:** March 23, 2023, 23:45 UTC
 - **ARN:** arn:aws:iam::aws:policy/AdministratorAccess-AWSElasticBeanstalk

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AlexaForBusinessNetworkProfileServicePolicy

Description: This policy enables Alexa for Business to perform automated tasks scheduled by your network profiles.

AlexaForBusinessNetworkProfileServicePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** March 13, 2019, 00:53 UTC
- **Edited time:** April 05, 2019, 21:57 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AlexaForBusinessNetworkProfileServicePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AmazonBedrockStudioPermissionsBoundary

Description: Defines the maximum permissions of IAM roles that Amazon Bedrock Studio creates for operating Amazon Bedrock Studio resources.

AmazonBedrockStudioPermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AmazonBedrockStudioPermissionsBoundary to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** August 01, 2024, 00:24 UTC
- **Edited time:** August 01, 2024, 00:24 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonBedrockStudioPermissionsBoundary

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonBraketServiceRolePolicy

Description: Allows Amazon Braket to create and manage AWS resources on your behalf

AmazonBraketServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** August 04, 2020, 17:12 UTC
- **Edited time:** August 06, 2020, 20:10 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonBraketServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

AmazonCognitoReadOnly

Description: Provides read only access to Amazon Cognito resources.

AmazonCognitoReadOnly is an [AWS managed policy](#).

Using this policy

You can attach `AmazonCognitoReadOnly` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** March 24, 2015, 17:06 UTC
 - **Edited time:** August 01, 2019, 19:21 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonCognitoReadOnly

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [
```

```

AmazonCognitoUnAuthedIdentitiesSessionPolicy

Description: This policy defines the set of permissions allowed for unauthenticated identities for Cognito Identity Pools. This policy is not intended to be used as a stand alone permission policy. It is used as a guardrail against overly permissive policies attached for roles in an identity pool. Do not attach this policy to any roles, as Cognito Identity Service will automatically include it as a scoped down policy when creating credentials. The privileges to temporarily access other AWS resources through the enhanced flow will now be defined by the intersection of the role associated with the identity of the unauthenticated user provided by a service, and the privileges given in this managed policy that is owned by Cognito.

AmazonCognitoUnAuthedIdentitiesSessionPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AmazonCognitoUnAuthedIdentitiesSessionPolicy` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** July 19, 2023, 23:04 UTC
 - **Edited time:** November 01, 2024, 18:12 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonCognitoUnAuthedIdentitiesSessionPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonCognitoUnauthenticatedIdentities

Description: This policy defines the set of permissions allowed for unauthenticated identities for Cognito Identity Pools. This does not need to be attached to your unauth role, as Cognito Identity Service will automatically include it as a scoped down policy when creating credentials. The privileges to temporarily access other AWS resources through the enhanced flow will now be defined by the intersection of the role associated with the identity of the unauthenticated user provided by a service, and the privileges given in this managed policy that is owned by Cognito.

AmazonCognitoUnauthenticatedIdentities is an [AWS managed policy](#).

Using this policy

You can attach `AmazonCognitoUnauthenticatedIdentities` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 01, 2023, 22:36 UTC
- **Edited time:** February 01, 2023, 22:36 UTC
- **ARN:** `arn:aws:iam::aws:policy/AmazonCognitoUnauthenticatedIdentities`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonConnectSynchronizationServiceRolePolicy

Description: Allows Amazon Connect to synchronize AWS resources across regions on your behalf.

AmazonConnectSynchronizationServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 27, 2023, 22:38 UTC
- **Edited time:** November 12, 2024, 22:22 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonConnectSynchronizationServiceRolePolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

AmazonDataZoneFullAccess

Description: Provides full access to Amazon DataZone via the AWS Management Console as well as limited access to related services that are required by it.

AmazonDataZoneFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZoneFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 22, 2023, 20:06 UTC
- **Edited time:** June 13, 2024, 19:02 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDataZoneFullAccess

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonDataZoneFullUserAccess

Description: Provides full access to Amazon DataZone, but does not allow the management of domains, users, or associated accounts.

`AmazonDataZoneFullUserAccess` is an [AWS managed policy](#).

Using this policy

You can attach `AmazonDataZoneFullUserAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** September 22, 2023, 21:06 UTC
 - **Edited time:** November 19, 2024, 21:38 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonDataZoneFullUserAccess

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneGlueManageAccessRolePolicy

Description: The policy grants permissions to allow Amazon DataZone to enable publishing and access grants to data.

AmazonDataZoneGlueManageAccessRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZoneGlueManageAccessRolePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** September 22, 2023, 20:21 UTC
- **Edited time:** June 28, 2024, 16:41 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/
AmazonDataZoneGlueManageAccessRolePolicy

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZonePortalFullAccessPolicy

Description: Provides full access to Amazon DataZone APIs

AmazonDataZonePortalFullAccessPolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZonePortalFullAccessPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 26, 2023, 18:24 UTC
- **Edited time:** March 26, 2023, 18:24 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDataZonePortalFullAccessPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : "datazonecontrol:*",  
            "Resource" : "*"  
        }  
    ]  
}
```

AmazonDataZoneProjectRolePermissionsBoundary

Description: Amazon DataZone creates IAM roles for projects to perform data analytics actions, and uses this policy when creating these roles to define the boundary of their permissions.

AmazonDataZoneProjectRolePermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZoneProjectRolePermissionsBoundary to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 21, 2023, 02:51 UTC
- **Edited time:** March 21, 2023, 02:51 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDataZoneProjectRolePermissionsBoundary

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneRedshiftGlueProvisioningPolicy

Description: Amazon DataZone is a data management service that enables you to catalog, discover, govern, share, and analyze your data. With Amazon DataZone, you can share and access your data across accounts and supported regions. Amazon DataZone simplifies your experience across AWS services, including, but not limited to, Amazon Redshift, Amazon Athena, AWS Glue, and AWS Lake Formation.

AmazonDataZoneRedshiftGlueProvisioningPolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZoneRedshiftGlueProvisioningPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 22, 2023, 20:19 UTC
- **Edited time:** October 23, 2024, 18:29 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDataZoneRedshiftGlueProvisioningPolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneRedshiftManageAccessRolePolicy

Description: This policy gives Amazon DataZone permissions to publish Amazon Redshift data to the catalog. It also gives Amazon DataZone permissions to grant access or revoke access to Amazon Redshift or Amazon Redshift Serverless published assets in the catalog.

`AmazonDataZoneRedshiftManageAccessRolePolicy` is an [AWS managed policy](#).

Using this policy

You can attach `AmazonDataZoneRedshiftManageAccessRolePolicy` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** September 22, 2023, 20:15 UTC
 - **Edited time:** November 16, 2023, 22:04 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AmazonDataZoneRedshiftManageAccessRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneSageMakerManageAccessRolePolicy

Description: The AmazonDataZoneSageMakerManageAccessRolePolicy policy grants Amazon DataZone the permissions required to grant user access to various resources in the SageMaker environment.

AmazonDataZoneSageMakerManageAccessRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonDataZoneSageMakerManageAccessRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** April 23, 2024, 23:34 UTC
- **Edited time:** April 23, 2024, 23:34 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDataZoneSageMakerManageAccessRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDevOpsGuruServiceRolePolicy

Description: A service-linked role required for Amazon DevOpsGuru to access your resources.

AmazonDevOpsGuruServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** December 01, 2020, 10:24 UTC
 - **Edited time:** January 10, 2023, 14:36 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonDevOpsGuruServiceRolePolicy

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDocDBElasticFullAccess

Description: Provides full access to Amazon DocumentDB Elastic Clusters and other required permissions for its dependencies including EC2, KMS, SecretsManager, CloudWatch and IAM.

AmazonDocDBElasticFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonDocDBElasticFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 05, 2023, 13:51 UTC
- **Edited time:** June 21, 2023, 18:05 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonDocDBElasticFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonEC2ContainerServiceEventsRole

Description: Policy to enable CloudWatch Events for EC2 Container Service

AmazonEC2ContainerServiceEventsRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonEC2ContainerServiceEventsRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** May 30, 2017, 16:51 UTC
- **Edited time:** March 06, 2023, 22:25 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/
AmazonEC2ContainerServiceEventsRole

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",
```

```
"Statement" : [
    {
        "Effect" : "Allow",
        "Action" : [
            "ecs:RunTask"
        ],
        "Resource" : [
            "*"
        ]
    },
    {
        "Effect" : "Allow",
        "Action" : "iam:PassRole",

AmazonEC2SpotFleetAutoscaleRole

Description: Policy to enable Autoscaling for Amazon EC2 Spot Fleet

AmazonEC2SpotFleetAutoscaleRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonEC2SpotFleetAutoscaleRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** August 19, 2016, 18:27 UTC
- **Edited time:** February 18, 2019, 19:17 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonEC2SpotFleetAutoscaleRole

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

{

```
"Version" : "2012-10-17",
"Statement" : [
    {
        "Effect" : "Allow",

AmazonEC2SpotFleetTaggingRole

Description: Allows EC2 Spot Fleet to request, terminate and tag Spot Instances on your behalf.

AmazonEC2SpotFleetTaggingRole is an [AWS managed policy](#).

Using this policy

You can attach `AmazonEC2SpotFleetTaggingRole` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** June 29, 2017, 18:19 UTC
 - **Edited time:** April 23, 2020, 19:30 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AmazonEC2SpotFleetTaggingRole

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonEKSClusterPolicy

Description: This policy provides Kubernetes the permissions it requires to manage resources on your behalf. Kubernetes requires Ec2:CreateTags permissions to place identifying information on EC2 resources including but not limited to Instances, Security Groups, and Elastic Network Interfaces.

AmazonEKSClusterPolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonEKSClusterPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 27, 2018, 21:06 UTC
- **Edited time:** November 01, 2024, 17:39 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonEKSClusterPolicy

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSLocalOutpostClusterPolicy

Description: This policy provides permissions to EKS local cluster's control-plane instances running in your account to manage resources on your behalf.

AmazonEKSLocalOutpostClusterPolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonEKSLocalOutpostClusterPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** August 24, 2022, 21:56 UTC
- **Edited time:** October 24, 2024, 17:59 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonEKSLocalOutpostClusterPolicy

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonEKSLocalOutpostServiceRolePolicy

Description: Allows Amazon EKS Local to call AWS services on your behalf.

`AmazonEKSLocalOutpostServiceRolePolicy` is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** August 23, 2022, 21:53 UTC
 - **Edited time:** October 24, 2022, 16:24 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonEKSLocalOutpostServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSServicePolicy

Description: This policy allows Amazon Elastic Container Service for Kubernetes to create and manage the necessary resources to operate EKS Clusters.

AmazonEKSServicePolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonEKSServicePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 27, 2018, 21:08 UTC
- **Edited time:** October 14, 2024, 21:12 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonEKSServicePolicy

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSServiceRolePolicy

Description: A Service-Linked Role required for Amazon EKS to call AWS services on your behalf.

AmazonEKSServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** February 21, 2020, 20:10 UTC

- **Edited time:** November 16, 2024, 17:42 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonEKSServiceRolePolicy

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonElastiCacheReadOnlyAccess

Description: Provides read only access to Amazon ElastiCache via the AWS Management Console.

AmazonElastiCacheReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonElastiCacheReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy

- **Creation time:** February 06, 2015, 18:40 UTC
- **Edited time:** February 06, 2015, 18:40 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonElastiCacheReadOnlyAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Action" : [  
        "elasticache:Describe*"  
      ],  
      "Effect" : "Allow",  
      "Resource" : "*"  
    }  
  ]  
}
```

AmazonElasticTranscoder_FullAccess

Description: Grants users full access to Elastic Transcoder and the access to associated services that is required for full Elastic Transcoder functionality.

`AmazonElasticTranscoder_FullAccess` is an [AWS managed policy](#).

Using this policy

You can attach `AmazonElasticTranscoder_FullAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** April 27, 2018, 18:59 UTC
 - **Edited time:** June 10, 2019, 22:51 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonElasticTranscoder_FullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Action" : [  
        "elastictranscoder:*",

AmazonEMRServerlessServiceRolePolicy

Description: Allows access to other AWS service resources that are required to run Amazon EMRServerless

AmazonEMRServerlessServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy

- **Creation time:** May 20, 2022, 23:15 UTC
- **Edited time:** January 25, 2024, 18:21 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonEMRServerlessServiceRolePolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Sid" : "EC2PolicyStatement",  
      "Effect" : "Allow",  
      "Action" : [

AmazonEMRServicePolicy_v2

Description: This policy is used for the Amazon EMR Service Role and should NOT be used for any other IAM users or roles in your account. The policy grants permissions to create and manage resources associated with EMR and related services necessary for the operation of your EMR cluster.

AmazonEMRServicePolicy_v2 is an [AWS managed policy](#).

Using this policy

You can attach AmazonEMRServicePolicy_v2 to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** March 12, 2021, 01:11 UTC
- **Edited time:** May 02, 2024, 18:43 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonEMRServicePolicy_v2

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonESCognitoAccess

Description: Provides limited access to the Amazon Cognito configuration service.

AmazonEScognitoAccess is an [AWS managed policy](#).

Using this policy

You can attach `AmazonESognitoAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** February 28, 2018, 22:29 UTC
 - **Edited time:** December 20, 2021, 14:04 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonESCognitoAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
    "cognito-identity:GetIdentityPoolRoles"
],
"Resource" : "*"
},
{
"Effect" : "Allow",
"Action" : "iam:PassRole",
"Resource" : "*",
"Condition" : {
"StringLike" : {
"iam:PassedToService" : [
"cognito-identity.amazonaws.com",
"cognito-identity-us-gov.amazonaws.com"
]
}
}
}
]
```

AmazonESFullAccess

Description: Provides full access to the Amazon ES configuration service.

AmazonESFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonESFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy

- **Creation time:** October 01, 2015, 19:14 UTC
- **Edited time:** October 01, 2015, 19:14 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonESFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Action" : [  
        "es:*"  
      ],  
      "Effect" : "Allow",  
      "Resource" : "*"  
    }  
  ]  
}
```

AmazonEventBridgePipesFullAccess

Description: Provides full access to Amazon EventBridge Pipes.

AmazonEventBridgePipesFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonEventBridgePipesFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** December 01, 2022, 17:03 UTC
- **Edited time:** December 01, 2022, 17:03 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonEventBridgePipesFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "EventBridgePipesActions",  
            "Effect" : "Allow",  
            "Action" : "pipes:*",  
            "Resource" : "*"  
        },  
        {  
            "Sid" : "IAMPassRoleAccessForPipes",  
            "Effect" : "Allow",  
            "Action" : "iam:PassRole",  
            "Resource" : "arn:aws:iam::*:role/*",  
            "Condition" : {  
                "StringLike" : {  
                    "iam:PassedToService" : "pipes.amazonaws.com"  
                }  
            }  
        }

AmazonFSxServiceRolePolicy

Description: Allows Amazon FSx to manage AWS resources on your behalf

AmazonFSxServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** November 28, 2018, 10:38 UTC
 - **Edited time:** January 10, 2024, 20:53 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonFSxServiceRolePolicy

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonGuardDutyMalwareProtectionServiceRolePolicy

Description: GuardDuty malware protection uses the service-linked role (SLR) named AWSServiceRoleForAmazonGuardDutyMalwareProtection. This service-linked role allows GuardDuty malware protection to perform agent-less scans to detect malware. It allows GuardDuty to create snapshots in your account, and share the snapshots with the GuardDuty service account to scan for malware. It evaluates these shared snapshots and includes the retrieved EC2 instance metadata in the GuardDuty Malware Protection findings. The AWSServiceRoleForAmazonGuardDutyMalwareProtection service-linked role trusts the malware-protection.guardduty.amazonaws.com service to assume the role.

AmazonGuardDutyMalwareProtectionServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonGuardDutyServiceRolePolicy

Description: Enable access to AWS Resources used or managed by Amazon Guard Duty

AmazonGuardDutyServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** November 28, 2017, 20:12 UTC
- **Edited time:** August 12, 2024, 20:01 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/
AmazonGuardDutyServiceRolePolicy

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonInspector2ReadOnlyAccess

Description: Provides read only access to the Amazon inspector2 service and relevant support services

AmazonInspector2ReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonInspector2ReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 21, 2022, 14:45 UTC
- **Edited time:** September 22, 2023, 20:56 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonInspector2ReadOnlyAccess

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {

AmazonInspector2ServiceRolePolicy

Description: Grants Amazon Inspector access to AWS services needed to perform security assessments

AmazonInspector2ServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** November 16, 2021, 20:27 UTC
 - **Edited time:** August 14, 2024, 16:03 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonInspector2ServiceRolePolicy

Policy version

Policy version: v13 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLaunchWizardFullAccessV2

Description: Full access to AWS Launch wizard and other required services.

AmazonLaunchWizardFullAccessV2 is an [AWS managed policy](#).

Using this policy

You can attach AmazonLaunchWizardFullAccessV2 to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 01, 2023, 17:14 UTC
- **Edited time:** September 01, 2023, 17:14 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonLaunchWizardFullAccessV2

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLexChannelsAccess

Description: This policy allows customers to call Lex runtime from channels

AmazonLexChannelsAccess is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** January 13, 2021, 20:12 UTC
- **Edited time:** January 13, 2021, 20:12 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonLexChannelsAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Action" : [  
                "lex>ListBots"  
            ],  
            "Effect" : "Allow",  
            "Resource" : "*"  
        }  
    ]  
}
```

AmazonLexFullAccess

Description: Provides full access to Amazon Lex via the AWS Management Console. Also provides access to create Lex Service Linked Roles and grant Lex permissions to invoke a limited set of Lambda functions.

AmazonLexFullAccess is an [AWS managed policy](#).

Using this policy

You can attach `AmazonLexFullAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** April 11, 2017, 23:20 UTC
 - **Edited time:** April 16, 2024, 20:06 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonLexFullAccess

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonMacieServiceRole

Description: Grants Macie read-only access to resource dependencies in your account in order to enable data analysis.

AmazonMacieServiceRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonMacieServiceRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** August 14, 2017, 14:53 UTC
- **Edited time:** August 14, 2017, 14:53 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonMacieServiceRole

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Resource" : "*",  
            "Action" : [  
                "s3:Get*",  
                "s3>List*"  
            ]  
        }  
    ]  
}
```

AmazonMSKReadOnlyAccess

Description: Provide readonly access to Amazon MSK

AmazonMSKReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonMSKReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 14, 2019, 22:28 UTC

- **Edited time:** January 14, 2019, 22:28 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonMSKReadOnlyAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Action" : [  
        "kafka:Describe*",  
        "kafka>List*",  
        "kafka:Get*",  
        "ec2:DescribeNetworkInterfaces",  
        "ec2:DescribeSecurityGroups",  
        "ec2:DescribeSubnets",  
        "ec2:DescribeVpcs",  
        "kms:DescribeKey"  
      ],  
      "Effect" : "Allow",  
      "Resource" : "*"  
    }  
  ]  
}
```

AmazonPersonalizeFullAccess

Description: Provides full access to Amazon Personalize via the AWS Management Console and SDK. Also provides select access to related services (e.g., S3, CloudWatch).

AmazonPersonalizeFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonPersonalizeFullAccess to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** December 04, 2018, 22:24 UTC
 - **Edited time:** May 30, 2019, 23:46 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AmazonPersonalizeFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "s3>DeleteObject",
        "s3>ListBucket"
    ],
    "Resource" : [
        "arn:aws:s3:::*Personalize*",
        "arn:aws:s3:::*personalize*"
    ]
},
{
    "Effect" : "Allow",
    "Action" : [
        "iam:PassRole"
    ],
    "Resource" : "*",
    "Condition" : {
        "StringEquals" : {
            "iam:PassedToService" : "personalize.amazonaws.com"
        }
    }
}
]
```

AmazonRDSCustomPreviewServiceRolePolicy

Description: Amazon RDS Custom Preview Service Role Policy

AmazonRDSCustomPreviewServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 08, 2021, 21:44 UTC
- **Edited time:** September 20, 2023, 17:48 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/
AmazonRDSCustomPreviewServiceRolePolicy

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRDSCustomServiceRolePolicy

Description: Allows Amazon RDS Custom to manage AWS resources on your behalf.

AmazonRDSCustomServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
 - **Creation time:** October 08, 2021, 21:39 UTC
 - **Edited time:** July 18, 2024, 17:33 UTC
 - **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonRDSCustomServiceRolePolicy

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRDSDataFullAccess

Description: Allows full access to use the RDS data APIs, secret store APIs for RDS database credentials, and DB console query management APIs to execute SQL statements on Aurora Serverless clusters in the AWS account.

AmazonRDSDataFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRDSDataFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 20, 2018, 21:29 UTC
- **Edited time:** November 20, 2019, 21:58 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonRDSDataFullAccess

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "secretsmanager:GetRandomPassword",
        "tag:GetResources"
    ],
    "Resource" : "*"
}
]
```

AmazonRDSDirectoryServiceAccess

Description: Allow RDS to access Directory Service Managed AD on behalf of the customer for domain-joined SQL Server DB instances.

AmazonRDSDirectoryServiceAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRDSDirectoryServiceAccess to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** February 26, 2016, 02:02 UTC
- **Edited time:** May 15, 2019, 16:51 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonRDSDirectoryServiceAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Action" : [  
                "ds:DescribeDirectories",  
                "ds:AuthorizeApplication",  
                "ds:UnauthorizeApplication",  
                "ds:GetAuthorizedApplicationDetails"  
            ],  
            "Effect" : "Allow",  
            "Resource" : "*"  
        }  
    ]  
}
```

AmazonRDSEnhancedMonitoringRole

Description: Provides access to Cloudwatch for RDS Enhanced Monitoring

AmazonRDSEnhancedMonitoringRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonRDSEnhancedMonitoringRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** November 11, 2015, 19:58 UTC
- **Edited time:** November 11, 2015, 19:58 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonRDSEnhancedMonitoringRole

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {

AmazonRDSPerformanceInsightsFullAccess

Description: Provides full access to RDS Performance Insights via the AWS Management Console

AmazonRDSPerformanceInsightsFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRDSPerformanceInsightsFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** August 15, 2023, 23:41 UTC
- **Edited time:** October 23, 2023, 21:14 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonRDSPerformanceInsightsFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonRDSPerformanceInsightsReadOnly

Description: Read-Only policy for RDS Performance Insights

AmazonRDSPerformanceInsightsReadOnly is an [AWS managed policy](#).

Using this policy

You can attach AmazonRDSPerformanceInsightsReadOnly to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** April 05, 2022, 00:02 UTC
- **Edited time:** October 23, 2023, 21:17 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonRDSPerformanceInsightsReadOnly

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonRedshiftAllCommandsFullAccess

Description: This policy includes permissions to run SQL commands to copy, load, unload, query, and analyze data on Amazon Redshift. The policy also grants permissions to run select statements for related services, such as Amazon S3, Amazon CloudWatch logs, Amazon SageMaker, or AWS Glue.

AmazonRedshiftAllCommandsFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRedshiftAllCommandsFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 04, 2021, 00:48 UTC
- **Edited time:** November 25, 2021, 02:27 UTC

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRedshiftQueryEditorV2FullAccess

Description: Grants full access to the Amazon Redshift Query Editor V2 operations and resources. This policy also grants access to other required services. This includes permissions to list the Amazon Redshift clusters, read keys and aliases in AWS KMS and manage the Query Editor V2 secrets in AWS Secrets Manager.

AmazonRedshiftQueryEditorV2FullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRedshiftQueryEditorV2FullAccess to your users, groups, and roles.

Policy details

AmazonRedshiftReadOnlyAccess

Description: Provides read only access to Amazon Redshift via the AWS Management Console.

AmazonRedshiftReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRedshiftReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy

- **Creation time:** February 06, 2015, 18:40 UTC
- **Edited time:** February 08, 2024, 00:24 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonRedshiftReadOnlyAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonRedshiftServiceLinkedRolePolicy

Description: Allows Amazon Redshift to call AWS services on your behalf

AmazonRedshiftServiceLinkedRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** September 18, 2017, 19:19 UTC
- **Edited time:** March 15, 2024, 20:00 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/
AmazonRedshiftServiceLinkedRolePolicy

Policy version

Policy version: v13 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRekognitionCustomLabelsFullAccess

Description: This policy specifies rekognition and s3 permissions required by Amazon Rekognition Custom Labels feature.

AmazonRekognitionCustomLabelsFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonRekognitionCustomLabelsFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** January 08, 2020, 19:18 UTC
- **Edited time:** August 16, 2022, 20:20 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonRekognitionCustomLabelsFullAccess

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonSageMakerAdmin-ServiceCatalogProductsServiceRolePolicy

Description: Service role policy used by the AWS service Catalog service to provision products from Amazon SageMaker portfolio of products. Grants permissions to a set of related services including CodePipeline, CodeBuild, CodeCommit, Glue, CloudFormation, etc.,.

AmazonSageMakerAdmin-ServiceCatalogProductsServiceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach `AmazonSageMakerAdmin-ServiceCatalogProductsServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 27, 2020, 18:48 UTC
- **Edited time:** July 01, 2024, 07:33 UTC
- **ARN:** `arn:aws:iam::aws:policy/AmazonSageMakerAdmin-ServiceCatalogProductsServiceRolePolicy`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasAI ServicesAccess

Description: Provides permissions for Amazon SageMaker Canvas to use AI services to support ready to use AI solutions. This policy will add more mutating permissions for services as Amazon SageMaker Canvas adds support.

AmazonSageMakerCanvasAI ServicesAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerCanvasAI ServicesAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** March 23, 2023, 22:36 UTC
- **Edited time:** November 29, 2023, 14:47 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerCanvasAI ServicesAccess

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasBedrockAccess

Description: This policy grants permissions to use Amazon Bedrock in SageMaker Canvas by providing access to downstream services such as S3.

AmazonSageMakerCanvasBedrockAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerCanvasBedrockAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 02, 2024, 18:37 UTC
- **Edited time:** February 02, 2024, 18:37 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerCanvasBedrockAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasDataPrepFullAccess

Description: Provides full access to Amazon SageMaker resources and operations for data preparation in Canvas. The policy also provides select access to related services (e.g., S3, IAM, KMS, RDS, CloudWatch Logs, Redshift, Athena, Glue, EventBridge, Secrets Manager). This policy should be attached to the Amazon SageMaker Domain/User Profile execution role.

AmazonSageMakerCanvasDataPrepFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerCanvasDataPrepFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 27, 2023, 22:56 UTC
- **Edited time:** August 16, 2024, 18:11 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerCanvasDataPrepFullAccess

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasFullAccess

Description: Provides full access to Amazon SageMaker Canvas resources and operations. The policy also provides select access to related services (e.g., S3, IAM, VPC, ECR, CloudWatch Logs, Redshift, Secrets Manager, and Forecast). This policy should be attached to the Amazon SageMaker Domain/User Profile execution role.

AmazonSageMakerCanvasFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerCanvasFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** September 09, 2022, 00:44 UTC
- **Edited time:** August 16, 2024, 04:35 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerCanvasFullAccess

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerClusterInstanceRolePolicy

Description: This policy grants permissions commonly needed to use Amazon SageMaker Cluster.

AmazonSageMakerClusterInstanceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerClusterInstanceRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 29, 2023, 15:11 UTC
- **Edited time:** November 29, 2023, 15:11 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerClusterInstanceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCoreServiceRolePolicy

Description: Managed policy for Service Linked Role for Amazon SageMaker Core Services

AmazonSageMakerCoreServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** December 21, 2020, 21:40 UTC
- **Edited time:** December 21, 2020, 21:40 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerCoreServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {

AmazonSageMakerEdgeDeviceFleetPolicy

Description: Provides permissions necessary for SageMaker Edge to create and manage a device fleet for the customer using the default cloud connection.

AmazonSageMakerEdgeDeviceFleetPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AmazonSageMakerEdgeDeviceFleetPolicy` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** December 08, 2020, 16:17 UTC
- **Edited time:** December 08, 2020, 16:17 UTC
- **ARN:** `arn:aws:iam::aws:policy/service-role/AmazonSageMakerEdgeDeviceFleetPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerGeospatialExecutionRole

Description: This policy provide access to services that are commonly needed to use SageMaker geospatial.

AmazonSageMakerGeospatialExecutionRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerGeospatialExecutionRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** November 30, 2022, 10:08 UTC
- **Edited time:** May 10, 2023, 20:28 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/
AmazonSageMakerGeospatialExecutionRole

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "s3:AbortMultipartUpload",  
                "s3:PutObject",

AmazonSageMakerHyperPodServiceRolePolicy

Description: This policy grants permissions to Amazon SageMaker HyperPod to related AWS services such as Amazon EKS, Amazon CloudWatch etc.

AmazonSageMakerHyperPodServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** September 06, 2024, 17:04 UTC
- **Edited time:** September 06, 2024, 17:04 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerHyperPodServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonSageMakerNotebooksServiceRolePolicy

Description: Managed policy for Service Linked Role for Amazon SageMaker Notebooks

AmazonSageMakerNotebooksServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 18, 2019, 20:27 UTC
- **Edited time:** November 14, 2024, 20:33 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerNotebooksServiceRolePolicy

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy

Description: Service role policy used by the AWS Lambda within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a set of related services including Secrets Manager and others.

AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach

AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** August 01, 2023, 15:05 UTC
- **Edited time:** August 01, 2023, 15:05 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/
AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",
```

```
"Action" : "secretsmanager:GetSecretValue",
"Resource" : "arn:aws:secretsmanager:*.*:secret:*",
"Condition" : {
    "Null" : {
        "aws:ResourceTag/sagemaker:partner" : false
    },
    "StringEquals" : {
        "aws:ResourceAccount" : "${aws:PrincipalAccount}"
    }
}
]
}
```

AmazonSageMakerPipelinesIntegrations

Description: This Amazon Managed Policy grants permissions commonly needed for use with Callback steps and Lambda steps in SageMaker Model Building Pipelines. It is added to the AmazonSageMaker-ExecutionRole that can be created when setting up SageMaker Studio. It can also be attached to any other role that will be used for authoring or executing pipelines.

AmazonSageMakerPipelinesIntegrations is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerPipelinesIntegrations to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** July 30, 2021, 16:35 UTC
- **Edited time:** February 17, 2023, 21:28 UTC

- **ARN:** arn:aws:iam::aws:policy/AmazonSageMakerPipelinesIntegrations

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy

Description: Service role policy used by the AWS CodeBuild within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a subset of related services including CodePipeline, CodeBuild and others.

`AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy` is an [AWS managed policy](#).

Using this policy

You can attach `AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** March 25, 2022, 04:27 UTC
 - **Edited time:** June 11, 2024, 18:45 UTC
 - **ARN:** arn:aws:iam::aws:policy/
AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerServiceCatalogProductsFirehoseServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",
```

```
"Statement" : [  
    {  
        "Effect" : "Allow",  
        "Action" : [  
            "firehose:PutRecord",  
            "firehose:PutRecordBatch"  
        ],  
        "Resource" : "arn:aws:firehose:*:*:deliverystream/sagemaker-*"  
    }

AmazonSageMakerServiceCatalogProductsGlueServiceRolePolicy

Description: Service role policy used by the AWS Glue within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a set of related services including Glue, S3 and others.

AmazonSageMakerServiceCatalogProductsGlueServiceRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonSageMakerServiceCatalogProductsGlueServiceRolePolicy to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** February 22, 2022, 09:51 UTC
- **Edited time:** August 26, 2022, 19:13 UTC

- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonSageMakerServiceCatalogProductsGlueServiceRolePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSecurityLakeAdministrator

Description: Provides full access to Amazon Security Lake and related services needed to administer Security Lake.

AmazonSecurityLakeAdministrator is an [AWS managed policy](#).

Using this policy

You can attach AmazonSecurityLakeAdministrator to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 30, 2023, 22:04 UTC

- **Edited time:** February 23, 2024, 16:01 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonSecurityLakeAdministrator

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSecurityLakeMetastoreManager

Description: Policy for Amazon SecurityLake meta store manager lambda which allows the access to cloudwatch, S3, Glue and SQS.

AmazonSecurityLakeMetastoreManager is an [AWS managed policy](#).

Using this policy

You can attach AmazonSecurityLakeMetastoreManager to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** January 23, 2024, 15:26 UTC
- **Edited time:** April 01, 2024, 20:04 UTC

- **ARN:** arn:aws:iam::aws:policy/service-role/
AmazonSecurityLakeMetastoreManager

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSecurityLakePermissionsBoundary

Description: Amazon Security Lake creates IAM roles for third-party custom sources to write data to a data lake and for third-party subscribers to consume data from a data lake, and uses this policy when creating these roles to define the boundary of their permissions.

AmazonSecurityLakePermissionsBoundary is an [AWS managed policy](#).

Using this policy

You can attach AmazonSecurityLakePermissionsBoundary to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 29, 2022, 14:11 UTC
- **Edited time:** May 14, 2024, 20:39 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSecurityLakePermissionsBoundary

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSEFullAccess

Description: Provides full access to Amazon SES via the AWS Management Console.

AmazonSEFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSEFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** February 06, 2015, 18:41 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSESFulAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "ses:*"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AmazonSESReadOnlyAccess

Description: Provides read only access to Amazon SES via the AWS Management Console.

AmazonSESReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonSESReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** May 14, 2024, 12:03 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonSESReadOnlyAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
    "Version" : "2012-10-17",
    "Statement" : [
        {
            "Sid" : "SESReadOnlyAccess",
            "Effect" : "Allow",
            "Action" : [
                "ses:Get*",
                "ses>List*",
                "ses:BatchGetMetricData"
            ],
            "Resource" : "*"
        }
    ]
}
```

```
    }  
]  
}

AmazonSSMFullAccess

Description: Provides full access to Amazon SSM.

AmazonSSMFullAccess is an [AWS managed policy](#).

Using this policy

You can attach `AmazonSSMFullAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** May 29, 2015, 17:39 UTC
 - **Edited time:** November 20, 2019, 20:08 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonSSMFullAccess

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonSSMMaintenanceWindowRole

Description: Service Role to be used for EC2 Maintenance Window

AmazonSSMMaintenanceWindowRole is an [AWS managed policy](#).

Using this policy

You can attach AmazonSSMMaintenanceWindowRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** December 01, 2016, 15:57 UTC
- **Edited time:** July 27, 2019, 00:16 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AmazonSSMMaintenanceWindowRole

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {
```

```
"Effect" : "Allow",
"Action" : [
    "ssm:GetAutomationExecution",

AmazonVerifiedPermissionsFullAccess

Description: Provides full access to Verified Permissions

AmazonVerifiedPermissionsFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonVerifiedPermissionsFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** October 11, 2024, 18:19 UTC
- **Edited time:** October 11, 2024, 18:19 UTC

- **ARN:** arn:aws:iam::aws:policy/AmazonVerifiedPermissionsFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "AccountLevelPermissions",  
            "Effect" : "Allow",

AmazonVPCReachabilityAnalyzerPathComponentReadPolicy

Description: This policy is attached to the role

IAMRoleForReachabilityAnalyzerCrossAccountResourceAccess. This role is deployed to the member accounts in an organization when the management account enables trusted access for Reachability Analyzer. It provides permissions to view resources from across your organization using the Reachability Analyzer console.

AmazonVPCReachabilityAnalyzerPathComponentReadPolicy is an [AWS managed policy](#).

Using this policy

You can attach AmazonVPCReachabilityAnalyzerPathComponentReadPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** May 01, 2023, 20:38 UTC
- **Edited time:** May 01, 2023, 20:38 UTC
- **ARN:** arn:aws:iam::aws:policy/
AmazonVPCReachabilityAnalyzerPathComponentReadPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Sid" : "NetworkFirewallPermissions",
```

```
        "Effect" : "Allow",
        "Action" : [
            "network-firewall:Describe*",
            "network-firewall>List*"
        ],
        "Resource" : "*"
    }
]
}
```

AmazonVPCReadOnlyAccess

Description: Provides read only access to Amazon VPC via the AWS Management Console.

AmazonVPCReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AmazonVPCReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** February 08, 2024, 17:08 UTC
- **ARN:** arn:aws:iam::aws:policy/AmazonVPCReadOnlyAccess

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
        "ec2:DescribeVpcEndpointConnections",
        "ec2:DescribeVpcEndpointServiceConfigurations",
        "ec2:DescribeVpcEndpointServicePermissions",
        "ec2:DescribeVpcEndpointServices",
        "ec2:DescribeVpcPeeringConnections",
        "ec2:DescribeVpcs",
        "ec2:DescribeVpnConnections",
        "ec2:DescribeVpnGateways",
        "ec2:GetSecurityGroupsForVpc"
    ],
    "Resource" : "*"
}
]
}
```

AmazonZocaloReadOnlyAccess

Description: Provides read only access to Amazon Zocalo

AmazonZocaloReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach `AmazonZocaloReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** February 06, 2015, 18:41 UTC
 - **Edited time:** February 06, 2015, 18:41 UTC
 - **ARN:** arn:aws:iam::aws:policy/AmazonZocaloReadOnlyAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [  
    {  
      "Effect" : "Allow",  
      "Action" : [  
        "zocalo:Describe*",
```

```
        "ds:DescribeDirectories",
        "ec2:DescribeVpcs",
        "ec2:DescribeSubnets"
    ],
    "Resource" : "*"
}
]
```

AppRunnerNetworkingServiceRolePolicy

Description: Allows AWS AppRunner Networking to manage related AWS resources on your behalf.

AppRunnerNetworkingServiceRolePolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** January 12, 2022, 21:02 UTC
- **Edited time:** January 12, 2022, 21:02 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AppRunnerNetworkingServiceRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWS-SSM-RemediationAutomation-OperationalAccountAdministrationRolePolicy

Description: Provides permissions for operational accounts to Remediate unmanaged nodes by providing Organisation specific permissions required by SSM automation to pull the list of member accounts within a root of an Organisation to trigger cross-account cross-region execution by allowing assuming Execution roles in target account/region.

AWS-SSM-RemediationAutomation-OperationalAccountAdministrationRolePolicy is an [AWS managed policy](#).

Using this policy

You can attach AWS-SSM-RemediationAutomation-OperationalAccountAdministrationRolePolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 16, 2024, 00:25 UTC
- **Edited time:** November 16, 2024, 00:25 UTC
- **ARN:** arn:aws:iam::aws:policy/AWS-SSM-RemediationAutomation-OperationalAccountAdministrationRolePolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",  
  "Statement" : [
```

```
{  
    "Sid" : "AllowReadOnlyAccessOrganization",

AWS_ConfigRole

Description: Default policy for AWS Config service role. Provides permissions required for AWS Config to track changes to your AWS resources.

AWS_ConfigRole is an [AWS managed policy](#).

Using this policy

You can attach AWS_ConfigRole to your users, groups, and roles.

Policy details

- **Type:** Service role policy
 - **Creation time:** September 15, 2020, 20:30 UTC
 - **Edited time:** November 06, 2024, 22:29 UTC
 - **ARN:** arn:aws:iam::aws:policy/service-role/AWS_ConfigRole

Policy version

Policy version: v33 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSAccountActivityAccess

Description: Allows users to access the Account Activity page.

AWSAccountActivityAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSAccountActivityAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 06, 2015, 18:41 UTC
- **Edited time:** March 07, 2023, 17:02 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSAccountActivityAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "account:GetAccountInformation",  
                "account:GetAlternateContact",  
                "account:GetChallengeQuestions",  
                "account:GetContactInformation",

AWSApplicationAutoscalingRDSClusterPolicy

Description: Policy granting permissions to Application Auto Scaling to access RDS and CloudWatch.

AWSApplicationAutoscalingRDSClusterPolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** October 17, 2017, 17:46 UTC
- **Edited time:** August 07, 2018, 19:14 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSApplicationAutoscalingRDSClusterPolicy

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
"Version" : "2012-10-17",

AWSApplicationMigrationConversionServerPolicy

Description: This policy allows the Application Migration Service (MGN) Conversion Server, which are EC2 instances launched by Application Migration Service, to communicate with the MGN service. An IAM role with this policy is attached (as an EC2 Instance Profile) by MGN to the MGN Conversion Servers, which are automatically launched and terminated by MGN, when needed. We do not recommend that you attach this policy to your IAM users or roles. MGN Conversion Servers are used by Application Migration Service when users choose to launch Test or Cutover instances using the MGN console, CLI, or API.

AWSApplicationMigrationConversionServerPolicy is an [AWS managed policy](#).

Using this policy

You can attach `AWSApplicationMigrationConversionServerPolicy` to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** April 07, 2021, 06:48 UTC
- **Edited time:** April 07, 2021, 06:48 UTC
- **ARN:** `arn:aws:iam::aws:policy/service-role/AWSApplicationMigrationConversionServerPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
    "Version" : "2012-10-17",
    "Statement" : [
        {
            "Effect" : "Allow",
            "Action" : [
                "mgn:SendClientMetricsForMgn",
                "mgn:SendClientLogsForMgn",
                "mgn:GetChannelCommandsForMgn",
                "mgn:SendChannelCommandResultForMgn"
            ],
            "Resource" : "*"
        }
    ]
}
```

AWSApplicationMigrationEC2Access

Description: This policy provides Amazon EC2 operations required to use Application Migration Service (MGN) to launch the migrated servers as EC2 instances. Attach this policy to your IAM users or roles.

AWSApplicationMigrationEC2Access is an [AWS managed policy](#).

Using this policy

You can attach AWSApplicationMigrationEC2Access to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** April 07, 2021, 07:05 UTC
- **Edited time:** February 06, 2023, 16:07 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSApplicationMigrationEC2Access

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSApplicationMigrationFullAccess

Description: This policy provides permissions to all public APIs of AWS Application Migration Service (MGN), as well as permissions to read KMS key information. Attach this policy to your IAM users or roles.

AWSApplicationMigrationFullAccess is an [AWS managed policy](#).

Using this policy

You can attach `AWSApplicationMigrationFullAccess` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** April 07, 2021, 06:56 UTC
- **Edited time:** May 19, 2024, 08:30 UTC
- **ARN:** `arn:aws:iam::aws:policy/AWSApplicationMigrationFullAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSApplicationMigrationMGHAccess

Description: This policy allows AWS Application Migration Service (MGN) to send meta-data about the progress of servers being migrated using MGN to AWS Migration Hub (MGH). MGN automatically creates an IAM role with this policy attached, and assumes this role. We do not recommend that you attach this policy to your IAM users or roles.

AWSApplicationMigrationMGHAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSApplicationMigrationMGHAccess to your users, groups, and roles.

AWSApplicationMigrationReadOnlyAccess

Description: This policy provides permissions to all read-only public APIs of Application Migration Service (MGN), as well as some read-only APIs of other AWS services that are required in order to make full read-only use of the MGN console. Attach this policy to your IAM users or roles.

AWSApplicationMigrationReadOnlyAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSApplicationMigrationReadOnlyAccess to your users, groups, and roles.

AWSApplicationMigrationReplicationServerPolicy

Description: This policy allows the Application Migration Service (MGN) Replication Servers, which are EC2 instances launched by Application Migration Service - to communicate with the MGN service, and to create EBS snapshots in your AWS account. An IAM role with this policy is attached (as an EC2 Instance Profile) by Application Migration Service to the MGN Replication Servers which are automatically launched and terminated by MGN, as needed. MGN Replication Servers are used to facilitate data replication from your external servers to AWS, as part of the migration process managed using MGN. We do not recommend that you attach this policy to your IAM users or roles.

AWSApplicationMigrationReplicationServerPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSApplicationMigrationReplicationServerPolicy to your users, groups, and roles.

AWSApplicationMigrationVCenterClientPolicy

Description: This policy allows installing and using the AWS VCenter Client, which is used with AWS Application Migration Service (MGN) to migrate external servers to AWS. Attach this policy to your IAM users or roles whose credentials you provide when installing the AWS VCenter Client.

AWSApplicationMigrationVCenterClientPolicy is an [AWS managed policy](#).

Using this policy

You can attach AWSApplicationMigrationVCenterClientPolicy to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 08, 2021, 12:53 UTC
- **Edited time:** November 08, 2021, 12:53 UTC

- **ARN:** arn:aws:iam::aws:policy/AWSApplicationMigrationVCenterClientPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",

AWSAutoScalingPlansEC2AutoScalingPolicy

Description: Policy granting permissions to AWS Auto Scaling to periodically forecast capacity and generate scheduled scaling actions for Auto Scaling groups in a scaling plan

AWSAutoScalingPlansEC2AutoScalingPolicy is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy
- **Creation time:** August 23, 2018, 22:46 UTC
- **Edited time:** August 23, 2018, 22:46 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSAutoScalingPlansEC2AutoScalingPolicy

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Effect" : "Allow",  
            "Action" : [  
                "cloudwatch:GetMetricData",  
                "autoscaling:DescribeAutoScalingGroups",  
                "autoscaling:DescribeScheduledActions",  
                "autoscaling:BatchPutScheduledUpdateGroupAction",  
                "autoscaling:BatchDeleteScheduledAction"  
            ],  
            "Resource" : "*"  
        }  
    ]  
}
```

AWSBackupAuditAccess

Description: This policy grants permissions for users to create controls and frameworks that define their expectations for AWS Backup resources and activities, and to audit AWS Backup resources and activities against their defined controls and frameworks. This policy grants permissions to AWS Config and similar services to describe user expectations perform the audits. This policy also grants permissions to deliver audit reports to S3 and similar services, and enables users to find and open their audit reports.

AWSBackupAuditAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupAuditAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** August 24, 2021, 01:02 UTC
- **Edited time:** April 10, 2023, 21:23 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSBackupAuditAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",

AWSBackupDataTransferAccess

Description: This policy allows the AWS Backint agent to complete backup data transfer with AWS Backup Storage plane. Attach this policy to roles assumed by EC2 Instances running SAP HANA with the Backint agent.

AWSBackupDataTransferAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupDataTransferAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** November 10, 2022, 22:48 UTC
- **Edited time:** November 10, 2022, 22:48 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSBackupDataTransferAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",

AWSBackupGatewayServiceRolePolicyForVirtualMachineMetadataSync

Description: Provides AWS BackupGateway permission to sync the metadata of Virtual Machines on your behalf

AWSBackupGatewayServiceRolePolicyForVirtualMachineMetadataSync is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupGatewayServiceRolePolicyForVirtualMachineMetadataSync to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** December 15, 2022, 19:43 UTC
- **Edited time:** December 15, 2022, 19:43 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSBackupGatewayServiceRolePolicyForVirtualMachineMetadataSync

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
  "Version" : "2012-10-17",
```

```
"Statement" : [  
    {  
        "Sid" : "ListVmTags",  
        "Effect" : "Allow",  
        "Action" : [  
            "backup-gateway>ListTagsForResource"  
        ],  
        "Resource" : "arn:aws:backup-gateway:*:*:vm/*"  
    },  
    {  
        "Sid" : "VMTagPermissions",

AWSBackupOperatorAccess

Description: This policy grants users permissions to assign AWS resources to backup plans, create on-demand backups, and restore backups. This policy does not allow the user to create or edit backup plans or to delete scheduled backups after they are created.

AWSBackupOperatorAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupOperatorAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** November 18, 2019, 22:23 UTC
 - **Edited time:** July 24, 2024, 18:58 UTC
 - **ARN:** arn:aws:iam::aws:policy/AWSBackupOperatorAccess

Policy version

Policy version: v16 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSBackupServiceLinkedRolePolicyForBackupTest

Description: Provides AWS Backup permission to create backups on your behalf across AWS services

AWSBackupServiceLinkedRolePolicyForBackupTest is an [AWS managed policy](#).

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type:** Service-linked role policy

- **Creation time:** May 12, 2020, 17:37 UTC
- **Edited time:** May 12, 2020, 17:37 UTC
- **ARN:** arn:aws:iam::aws:policy/aws-service-role/AWSBackupServiceLinkedRolePolicyForBackupTest

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "elasticfilesystem:Backup",
        "elasticfilesystem:DescribeTags"
      ],
      "Resource" : "arn:aws:elasticfilesystem:*::file-system/*",
      "Effect" : "Allow",
      "Condition" : {
        "StringLike" : {
          "aws:ResourceTag/aws:elasticfilesystem:default-backup" : "enabled"
        }
      }
    },
    {
      "Action" : [
        "tag:GetResources"
      ],
      "Resource" : "*",
      "Effect" : "Allow"
    }
  ]
}
```

AWSBackupServiceRolePolicyForRestores

Description: Provides AWS Backup permission to perform restores on your behalf across AWS services. This policy includes permissions to create and delete AWS resources, such as EBS volumes, RDS instances, and EFS file systems, which are part of the restore process.

AWSBackupServiceRolePolicyForRestores is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupServiceRolePolicyForRestores to your users, groups, and roles.

Policy details

- **Type:** Service role policy
- **Creation time:** January 12, 2019, 00:23 UTC
- **Edited time:** December 15, 2023, 22:05 UTC
- **ARN:** arn:aws:iam::aws:policy/service-role/AWSBackupServiceRolePolicyForRestores

Policy version

Policy version: v20 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSBackupServiceRolePolicyForS3Backup

Description: Policy containing permissions necessary for AWS Backup to backup data in any S3 bucket. This includes read access to all S3 objects and any decrypt access for all KMS keys.

AWSBackupServiceRolePolicyForS3Backup is an [AWS managed policy](#).

Using this policy

You can attach AWSBackupServiceRolePolicyForS3Backup to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** February 18, 2022, 17:40 UTC
- **Edited time:** May 17, 2024, 17:12 UTC
- **ARN:** arn:aws:iam::aws:policy/AWSBackupServiceRolePolicyForS3Backup

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSBackupServiceRolePolicyForS3Restore

Description: Policy containing permissions necessary for AWS Backup to restore a S3 backup to a bucket. This includes read/write permissions to all S3 buckets, and permissions to GenerateDataKey and DescribeKey for all KMS keys.

AWSBackupServiceRolePolicyForS3Restore is an [AWS managed policy](#).

Using this policy

You can attach `AWSBackupServiceRolePolicyForS3Restore` to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
 - **Creation time:** February 18, 2022, 17:39 UTC
 - **Edited time:** February 07, 2023, 00:06 UTC
 - **ARN:** arn:aws:iam::aws:policy/AWSBackupServiceRolePolicyForS3Restore

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSBugBustFullAccess

Description: This IAM policy grants users full access to the AWS BugBust console

AWSBugBustFullAccess is an [AWS managed policy](#).

Using this policy

You can attach AWSBugBustFullAccess to your users, groups, and roles.

Policy details

- **Type:** AWS managed policy
- **Creation time:** June 24, 2021, 07:03 UTC
- **Edited time:** July 22, 2021, 20:04 UTC

- **ARN:** arn:aws:iam::aws:policy/AWSBugBustFullAccess

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{  
    "Version" : "2012-10-17",  
    "Statement" : [  
        {  
            "Sid" : "CodeGuruReviewerPermission",  
            "Effect" : "Allow",  
            "Action" : [  
                "codeguru-reviewer:DescribeCodeReview",  
                "codeguru-reviewer>ListRecommendations",  
                "codeguru-reviewer>ListCodeReviews"  
            ],  
            "Resource" : "*"  
        },  
        {  
            "Sid" : "CodeGuruProfilerPermission",  
            "Effect" : "Allow",  
            "Action" : [  
                "codeguru-profiler>ListProfilingGroups",  
                "codeguru-profiler:DescribeProfilingGroup"  
            ],  
            "Resource" : "*"  
        },  
        {  
            "Sid" : "AWSBugBustFullAccess",  
            "Effect" : "Allow",
